

NYC Residential Water Survey Request Form

As part of a *free* residential water survey, we will:

- Conduct a leak survey of your property including dye tests of toilets;
- Measure the flow rates of showerheads, and faucets and the flush volume of gravity tank toilets;
- In larger multi-family properties, which may have common rooms and/or small commercial properties, these areas will be surveyed as well.
- Issue a summary letter which: describes any leaks found by the survey, including estimated size and location, lists the units surveyed, describes any water saving devices installed and estimates potential savings from the repair of any noted leaks and/or the implementation of water-conserving measures.

Please note that this survey will not necessarily identify all possible leaks. Leaks which only occur during operation of certain water-using appliances may not always be evident during the survey. The survey cannot substitute for an ongoing water management program.

To request a survey, please enter all information requested in the section below. (Requests can only be made by Property Owners, full-time HPD-registered managing agents for the property, or firms registered with DEP as authorized agents of the property owner.) When you have filled-in all information, please mail, fax or scan/email the completed form to:
