

What is an Agency Chief Decarbonization Officer?

Thank you for your interest in the City of New York **Agency Chief Decarbonization Officer** position! In compliance with Executive Order 89, multiple City of New York agencies have successfully appointed their ACDOs.

The Agency Chief Decarbonization Officer (ACDO) is accountable for directing all efforts to reach decarbonization targets established for the agencies they lead, in response to LL97 of 2019*, which mandates that New York City's government operations reduce 40% of greenhouse gas emissions by 2025 and 50% by 2030. Using the LL97 Implementation Action Plan** as the path for compliance, the ACDO will serve as an executive-level strategist within their appointed NYC agency, responsible for partnering with agency leadership and staff to fully embed energy efficiency and carbon emissions reductions considerations into the agency. Their work is expected to include helping the agency access required resources (funding, personnel, and contracts), driving project identification and delivery, and making decarbonization part of agency policy, operations, and capital planning.

The vacancy has now expired. You can review the archived job description by going to www.nyc.gov/jobs and searching for Job ID# 609289; you can also click [here](#).
