Pesticide Use by New York City Agencies in 2011

EXECUTIVE SUMMARY

Local Law 54 of 2007 requires the New York City Department of Health and Mental Hygiene (DOHMH) to summarize annual City agencies' pesticide use. In 2011, 22 municipal agencies reported to DOHMH their pesticide use in a format that enabled summarization within and across agencies. This report summarizes pesticides applied by or on behalf of agencies on city owned or leased property.

Key findings include:

- Pesticides were applied a total of 149,278 times by New York City in 2011. Agencies used a total of 5,325 gallons and 123,482 pounds of pesticides (Table 1).
- Insecticides were the most frequently applied type of pesticide, accounting for nearly 59% of all applications. (Table 1)
- The most heavily used type of pesticide by volume was insecticides, accounting for 40% while insecticides by weight made up 52% of all pesticides used by City agencies (Table 1). When excluding the DOHMH West Nile Virus (WNV) larviciding program, rodenticides were the most heavily used with 51% by weight.
- New York City agencies are not the only users of pesticides in New York City. New York State summarizes pesticide use by all applicators – commercial and private. Comparing New York City agencies' use in 2005 (the last year New York State released its data), local government use accounts for just 2% of the total volume of liquid pesticides, and 13% of the total pounds of solid pesticides applied within the five boroughs of New York City.
- In comparison to reporting amounts in 2010, there was a 36% decrease in herbicide use by volume continuing a decline from much higher levels in 2009. (Figure 2)
- There was a 29% decrease in insecticides by volume. Most of that decline was a 28% reduction in pyrethroids applied, especially for the control of cockroaches. (Figure 2 and Figure 3)
- “Best Management Practices” products (Appendix 3) – largely gel and bait insecticides with little potential for human exposure – accounted for 27% of the number of insecticide applications in 2011, an increase of 14% from the number of applications in 2010 (data not shown). The total quantity (weight) of these “Best Management Practices” products used declined slightly by 8%. This follows a trend from previous years of decline in the amounts of these products reported by weight (Figure 1).

- There was a 19% decrease in rodenticide amounts used by agencies over 2010, but but there is no clear trend in use over the past four years. The timing and size of neighborhood rat ‘indexing’ campaigns can influence year-to-year trends in use. (Figure 1)
- Roaches were the most commonly targeted pests in 2011, with rats, mice, bed bugs and mosquitos making up the top 5 pests by number of total applications. (Table 3)
- The amount of pyrethroids by volume applied to target bed bugs has declined by 5% since 2010 after a decline by 36% from 2009 to 2010. (Figure 3)
- The amount of pyrethroids by volume applied to target roaches show wide fluctuations year to year with a 36% decline from 2010 to 2011 after an 89% increase from 2009 to 2010. (Figure 3)

Pesticide Use by New York City Agencies in 2011

I. BACKGROUND

When Local Law 37 was enacted on May 9, 2005, New York City became the largest municipality in the nation to regulate the use of pesticides on city-owned and leased property. Local Law 37 established new requirements regarding pesticide use on property owned or leased by the City, including the prohibition of certain pesticide products, posting of warning notices prior to pesticide use, and the requirement that agencies report their pesticide use on annual basis. With the enactment of Local Law 37 in May 2005, prohibitions from use were phased in for certain pesticides used by agencies or their contractors on City owned and leased properties. By November, 2005, EPA Toxicity Category 1 (signal word “danger”) was prohibited. In May 2006, use of all pesticides classified by the EPA as possible, probable or known human carcinogens ended. And in November 2006, use of all pesticides classified by the State of California’s Office of Environmental Health Hazard Assessment as developmental toxins ceased.

Local Law 37 exempted from prohibition several uses and products that posed little or no risk of human exposure, including rodenticides placed in tamper-proof containers or applied directly into rat burrows or inaccessible areas, containerized insect baits, and certain other types of insecticides such as boric acid, silica, and diatomaceous earth. The New York City Department of Health and Mental Hygiene (DOHMH), under Local Law 37 authorization, further waived from prohibition the use of all insecticide gels containing the ingredients fipronil and hydramethylnon due to their effectiveness and low potential for human exposure. In addition, Local Law 37 empowered DOHMH to consider and grant requests for waivers from prohibition on a case-by-case basis. DOHMH maintains a webpage on Local Law 37 at <http://nyc.gov/health/ll37> that includes a list of all waivers granted to agencies.

In October, 2007 New York City enacted Local Law 54 which requires City agencies to report their pesticide use to DOHMH, and for DOHMH to issue a summary report to the City Council and the Mayor. This is the fourth annual summary report and fulfills these requirements. City agencies have made significant improvements since the enactment of Local Law 37 to the quality and delivery of pesticide use data. In 2006, just three agencies provided data in an electronic format that enabled data to be summarized. In 2011, Thirty one agencies reported electronic data with two agencies reporting no applications made.

II. SOURCES OF PESTICIDE USE DATA

New York City agencies are required to report to DOHMH their pesticide use by February 1 for the preceding calendar year. This report summarizes data received by the Department for pesticides applied during calendar year 2011. All reporting New York City agencies and their contractors provided data to DOHMH in electronic format.

DOHMH launched and hosts an electronic reporting tool, the New York Pesticide Use Reporting System (NYCPURS) that all agencies, contractors and licensed pest control applicators can register to use. In August 2008, DOHMH launched the import function of NYCPURS permitting importation of data maintained by other electronic systems and since then more agencies and their contractors have used this system.

Source data for each pesticide application includes the product name, Environmental Protection Agency (EPA) registration number, the quantity used (expressed as either weight or volume), the method of application, and the date and location the product was applied. DOHMH utilizes the EPA's pesticide information system to link these data - by registration number - to determine a product's pesticide type and class, toxicity score, and its class and active ingredients. In addition, we linked these data to the EPA Office of Pesticide Programs' List of Chemicals Evaluated for Carcinogenic Potential and the State of California's List of Chemicals Known to the State to Cause Cancer or Reproductive Toxicity, both downloadable at <http://nyc.gov/health/ll37>.

III. METHODS AND LIMITATIONS

Data in a variety of electronic formats were imported into a single database, where it was checked for quality, accuracy and validity. Weight and volumetric units were standardized to pounds and gallons, respectively. Products sold in solid form will primarily be reported by weight and liquids primarily by volume. Each record of data was assigned an agency identifier corresponding to the source agency. Data were analyzed using SQL, Excel and Access. We analyzed data by pesticide type and class, and report total numbers, pounds and gallons of applications for New York City, and by agency on whose behalf the pesticides were applied.

Where DOHMH was able to evaluate the completeness of these records, it is reported by agency, below. It is still not possible to fully determine whether each agency was able to report each pesticide application. Many agencies depend upon contractors to maintain records of pesticides applied, and may not be certain that the contractors have fully complied with Local Law 37 reporting requirements. There are some limitations in the data:

- The formats used were more streamlined for 2011 and we were able to capture more information pertaining to the target organisms of the pesticides applied by agencies.
- Staff and contractor turnover has led to difficulty maintaining dependable and timely reporting from some agencies.
- Reporting errors, especially in reporting the incorrect units, can greatly skew the data. This is seen most frequently in the use of gallons and grams. Many reporting errors for 2011 were caught and corrected.
- Year to year variations in agency pesticide use can be due to a number of factors including but not limited to changes in practice, budgets and the incidence in actual pest problems.

Despite the above mentioned limitations, the data being captured continues to improve over previous years as more agencies and their contractors are using NYCPURS. We expect to see further improvements in the data over the next year as more agencies fully adopt electronic recordkeeping, migrating existing electronic or paper systems to the NYCPURS system developed by DOHMH for electronic recordkeeping. Additional information about NYCPURS is available at <http://nyc.gov/health/1137>.

IV. PESTICIDE USE FINDINGS

A. TYPES OF PESTICIDES USED BY AGENCIES

Four main types of pesticides were applied by agencies: rodenticides (products used to kill rodents); insecticides (to kill insects); herbicides (to kill plants) and fungicides (to kill molds and other fungi).

Rodenticides

Most rodenticides act as anticoagulants and all are acutely toxic if ingested in sufficient dosages. Common rodenticide active ingredients are bromodiolone, diphacinone, brodifacoum, zinc phosphide and warfarin. Some common rodenticide products used by agencies in 2011 were: Contrac All-Weather Blox®, Generation Mini Blocks®, Weatherblok Bait with Bitrex® and Ditrac All-Weather Blox®.

In 2011, a total of 33,022 pounds of rodenticides were applied by City agencies, accounting for 26.7% by weight of all pesticides applied, and 51.4% by weight when excluding WNV larvacides. (Table 1)

Insecticides

A total of 2,131 gallons and 64,488 pounds of insecticides were applied by New York City in 2011, accounting for 40.0% by volume, and 52.2% by weight of the total applications. Biological insecticides applied to target mosquito larvae account for 91.8% of insecticides by weight. (Table 1) When those products are excluded, 5,314 pounds of insecticides by weight were applied making up 8.3% of solid pesticides applied. Insecticides used by NYC agencies in 2011 were largely comprised of three classes of products; pyrethrins and pyrethroids, organophosphates and carbamates, and “Best Management Practices” products.

Pyrethrins, Pyrethroids, and Synergists

Pyrethrins and pyrethroids are less acutely toxic than the organophosphate and carbamate pesticides they have largely replaced. Accidental poisonings from professional applications are very rare, though personal use of aerosol and fogging product formulations have been associated with acute exposures, poisonings and fires. Some pyrethroids may be respiratory allergens for sensitized people, including asthmatics. Though these chemicals have lower acute toxicity, there

is some emerging concern over the chronic neurotoxicity of pyrethrins, pyrethroids, and their synergists. EPA has classified pyrethrins, their synergists, and several pyrethroids as suspected human carcinogens. Pyrethrins and pyrethroids break down relatively quickly when used outdoors, but persist longer when applied indoors.

Common pyrethroid active ingredients are cypermethrin, cyfluthrin, esfenvalerate, and deltamethrin. Pyrethrin and pyrethroid products used by agencies in 2011 include Whitmere Optem ME PT 600®, Steri-Fab®, Demand CS Insecticide®, Tempo SC Insecticide®, Suspend SC Insecticide® and Speckoz Evercide Esfenvalerate EC®.

Together, pyrethrins and pyrethroids accounted in 2011 for 82.8% of the total insecticides amounts applied by volume and 1.9% by weight, 23.6% by weight when excluding WNV larvicides. These products made up 64.8% of the total number of insecticide applications. There was 27.9% decline in pyrethroids applied by volume 2010 to 2011.

Organophosphates and Carbamates

Organophosphate and carbamate insecticides both function by inhibiting the neurotransmitter cholinesterase. Until EPA banned their use for most indoor applications in 1999 and 2000, organophosphates were the most heavily used class of insecticides. EPA also allowed the registrations for several carbamates to lapse.

The only organophosphate active ingredient used in 2011 was outdoor applications of chlorpyrifos on certain golf courses. The few carbamate active ingredients used in 2011 include propoxur and methomyl used in containerized baits. Organophosphate and carbamate products applied by agencies in 2011 include Anderson Golf Products Insecticide III® and Golden MalrinRF-128 Fly Killer®.

Reports submitted by agencies showed that, in 2011, the use of organophosphates and carbamates accounted for just 4.9% of the total insecticides applied by agencies by volume, and 1.1% by weight, 12.8% by weight excluding WNV larvicides, remaining a very small percentage of the insecticides used by city agencies. These products made up only 0.08% of the total number of insecticide applications.

“Best Management Practices” Insecticides

Several insecticide products have been introduced to the market whose proper use involves little or no potential risks for human exposure but that have been demonstrated to be highly effective at controlling pests. These products include biological pesticides for mosquito control and gels and baits for cockroach and other insect control. These products are the preferred insecticides used by agencies as part of their integrated pest management program and are referred to as “Best Management Practice Insecticide”. A complete list of these products is listed in Appendix 3.

Common active ingredients for these products include boric acid, silica gel, diatomaceous earth, the bacteria *Bacillus sphaericus* and *Bacillus thuringiensis*, hydramethylnon, fipronil, avermectin, and indoxacarb. Some of the products used by agencies for this reporting year were

Maxforce Roach Bait F.05®, Redzone Bait®, Vectobac CG Biological Larvicide Granules®, Vectolex CG Biological Larvicide®, Avert Prescription Treatment TC 93A Bait®, and DuPont Advion Cockroach Gel Bait®.

In 2011 7.3% of the total insecticides applied by volume, and 94.7% by weight, were insecticidal dusts, gels and baits, or biological larvicides. Excluding WNV larvicides, the totals equal 35.1% of insecticide products by weight. These products made up 27.2% of the total number of insecticide applications.

Herbicides

The herbicides used by New York City agencies in 2011 were used primarily for vegetation control in parks and for the maintenance of highways and street medians. The active ingredients most commonly used in 2011 were glyphosate, dinitroanilines, chlorophenoxyacetic acids and ureas. Herbicides were a major contributor of pesticide use by agencies.

A total of 2,003 gallons and 12,566 pounds were applied, accounting for 37.6% of total volume and 10.2% of total weight, 19.5% when excluding WNV larvaciding, of all pesticides used by agencies in 2011. (Table 1)

Glyphosate

The most heavily used herbicides applied as a liquid by agencies were glyphosates in Roundup® products. Glyphosate is a broad-spectrum, non-selective systemic herbicide that can be used throughout the growing season. The active ingredient glyphosate poses little risk of acute poisonings or chronic health effects and has not been shown to be carcinogenic. Glyphosate use has increased as agencies have phased out the use of herbicides prohibited under Local Law 37. In 2011 34.2% of applications of herbicide by volume contained glyphosate, a 40% increase from 2010.

Dinitroaniline

Dinitroaniline-based herbicides, which are often combined with fertilizers, are used early in the growing season as pre-emergents. They are of low acute toxicity to people, but several dinitroanilines are classified by EPA as suspected human carcinogens. Dinitroaniline herbicides break down slowly. Common dinitroaniline active ingredients are pendimethalin, trifluralin, benefin and benfluralin. Common dinitroaniline products used by agencies in 2011 were Lesco Pre-M 3.3 EC Turf Herbicide® and Turf Fertilizer® – Contains Team 0.92%.

Chlorophenoxyacetic/Benzoic Acids

The chlorophenoxyacetic acid herbicides are a family of related chemicals that are often combined in products. EPA classifies one member of this class of pesticides - mecoprop-p – as a suspected carcinogen. Common chlorophenoxyacetic acid active ingredients are 2,4-D, MCPP, mecoprop-p, dicamba and MCPA. Common chlorophenoxyacetic acid products used by agencies in 2011 were Trimec 937 Herbicide® and Cool Power Selective Herbicide®

Ureas

Like dinitroaniline herbicides, urea herbicides are of low acute toxicity, but some may pose certain chronic risks. Classification as a possible human carcinogen varies within the group. Diuron, a urea herbicide among the ten most heavily used herbicides reported by commercial applicators in the private market in the City in 2005, is classified by the EPA as a likely human carcinogen. Sulfonylureas are of low acute toxicity and have been so classified. All urea herbicides are highly persistent. Common Urea active ingredients are Diuron and Siduron. Common urea products used by NYC agencies in 2011 were Dupont Oust Extra Herbicide® and Dupont Escort XP Herbicide®.

Fungicides

Many of the commonly applied fungicides are classified by EPA as suspected carcinogens. The potential for exposure can exist throughout the growing season because many of these fungicides are also persistent, with half-lives measured in months and years. Degradation does not necessarily reduce the hazard, because some fungicides also have highly toxic breakdown products. Fungicides were most commonly applied by NYC on golf courses, and these applications are exempt from Local Law 37 prohibitions.

The active ingredients of fungicides commonly used in NYC in 2011 were chlorothalonil, thiophanate-methyl, PCNB, iprodione and mancozeb. Common fungicide products applied in 2011 include Heritage Fungicide®, Aliette WDG Brand Fungicide®, Lescro Manicure Ultra® and Bayleton 50 Turf and Fore 80WP Rainshield®.

Fungicides make up a smaller portion of the overall pesticide use by agencies, accounting for 19.3% of the total pesticide applied by volume and 10.1% by weight, and 19.5% by weight when excluding WNV larvacides. (Table 1)

B. SUMMARY OF CITYWIDE PESTICIDE USE

Pesticide use can be measured and compared in a number of ways. Throughout the remainder of this report, we describe the frequency with which pesticides are applied, as well as the quantity of pesticides applied. Quantities for liquid applications are measured as volume in gallons. Quantities for solid applications are measured as weight in pounds. Pesticides were applied a total of 149,278 times by New York City in 2011. The pesticides applied most frequently by New York City were insecticides. Insecticides were the most heavily used in terms of weight and herbicides in terms of volume. In 2011, 91.8% of the insecticides reported by weight were bacterial products designed to kill mosquito larvae in stagnant waters, away from human contact. If we exclude these products, which were used as part of the West Nile Virus control program then 8.3% of the total pesticide by weight would be due to insecticides. The majority of rodenticide applied by the City of New York is placed directly into rat burrows and poses little risk of exposure to the public. Table 1, below, summarizes these findings. This table, as all others that follow, is sorted in order of descending number of applications.

Table 1. Total Applications Reported Applied by NYC Agencies in 2011, by Pesticide Type

Pesticide Type	Volume		Weight			Times Applied	
	Gallons	% of Total	Pounds	% of Total	% wo WNV	Number	% of Total
Rodenticide	100.28	1.9%	33,021.99	26.7%	51.3%	55,365	37.1%
Insecticide	2,131.98	40.0%	64,488.15	52.2%	8.3%	87,297	58.5%
Herbicide	2,003.48	37.6%	12,566.23	10.2%	19.5%	2,820	1.9%
Fungicide	1,028.33	19.3%	12,513.07	10.1%	19.5%	714	0.5%
Other	60.79	1.1%	894.85	0.7%	1.4%	3,085	2.1%
Totals:	5,325		123,484			149,281	

Table 2, below lists the ten most frequently used products used for each pesticide type on New York City owned or leased property in 2011. For each, we list the total volume, weight and number of applications, as well as the active ingredient(s), the EPA toxicity category, whether the product is considered by EPA a known, possible or suspect carcinogen, and whether the product is listed by the State of California as a reproductive hazard. For this and subsequent product tables, the toxicity category refers to the EPA’s assigned label warning to indicate the degree of acute toxicity from oral, dermal and inhalation exposures on a scale from 1 to 4. Toxicity Category 1 indicates pesticides considered highly toxic and whose label requires the signal word, “Danger”. Toxicity Category 2 products are considered moderately toxic and product labels carry the word “Warning” Toxicity Category 3 products are considered to be slightly toxic while Toxicity 4 products are considered relatively non-toxic. Both toxicity categories 3 and 4 carry the signal word “Caution” A complete list of products used by New York City by pesticide class is included in Appendix 1 to this report.

C. CHANGES IN PESTICIDE USE

The level of completeness of agency pesticide reporting has improved dramatically over the past four years. Having a sufficiently complete record of pesticide applications by the City of New York and its contractors has now made it possible for a year to year comparison of trends in pesticide use by city agencies. Some of these trends have used target pest to stratify the application amounts. A complete listing of application amounts by target pest is listed in Table 3.

Table 3: Complete listing of pesticide applications by New York City Agencies by Target Pest, 2011

Target Pest	Volume in Gallons	Weight in Pounds	Total Applications	% of Total Applications
Roaches	1,062	3,435	55,581	37%
Rats	17	19,822	30,084	20%
Mice	133	10,963	24,501	16%
Bedbugs	685	55	12,692	9%
Mosquitoes	1	60,790	8,161	5%
Asian Longhorned Beetle	5	689	4,820	3%
Other Crawling Insects	17	23	3,348	2%
Weeds, vines, or grasses	2,003	12,566	2,819	2%
Ants	33	73	2,328	2%
Other Rodents	0	874	1,965	1%
Flying insects	81	48	767	1%
Fungal Disease or Infestation	1,028	12,513	714	0%
Other Pests / Missing	258	1,633	1,501	1%
Totals:	5,325	123,484	149,281	

Figures 1 and 2 show trends from 2008 through 2011 in use of pesticides by city agencies by type of target pest, with products reported by weight and volume respectively. In Figure 1, WNV program larvicides are charted separately from other insecticides because WNV larvicides

are a large proportion of city insecticide use and because year to year variation in larvicide use is more weather dependent than use of other insecticides. Non-WNV insecticide use has generally been declining, while fungicides reported by weight have remained very consistent from year to year and consist almost exclusively of fungicides applied to turf on city golf courses.

Rodenticides and WNV larvicides are not included in figure 2 as the products are almost exclusively solid formulations.

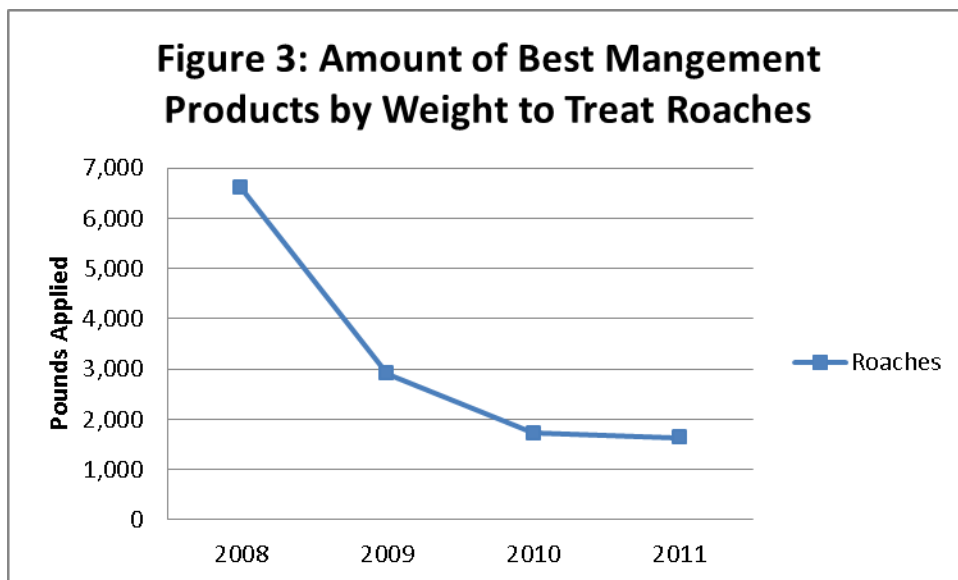

In 2011 herbicides reported by volume decreased by 36% (Figure 2) even though there was a 40% increase in the amount of glyphosate applied by volume. The high volume of herbicide (mostly glyphosate) used in 2009 is due in part to variable weather conditions more conducive to

weed growth and large discreet projects by the Parks department to control invasive species after previous years of delayed maintenance in remote, often wooded, parkland.

Use of spray formulations vs. Best Management Practices

From 2008 to 2011 there was a 52% decrease in use of insecticides reported by volume, with most of the change occurring between 2008 and 2009 (Figure 2). From 2008 to 2011 there was also a drop of 37% by weight in WNV larvicides.

By looking only at applications for roaches and not bed bugs or other pests a more consistent trend is observed, especially for best practice products. There was a consistent reduction in these “Best Management Practices” products to combat roaches with a 41% decrease in amount reported for roaches from 2009 to 2010 and a further decline in amount reported from 2010 to 2011 of 5% (Figure 3). From 2008 to 2009 a steep 56% decrease in weight was due to a large quantity of insecticide bait traps applied by the NYC Housing Authority (NYCHA) in 2008.

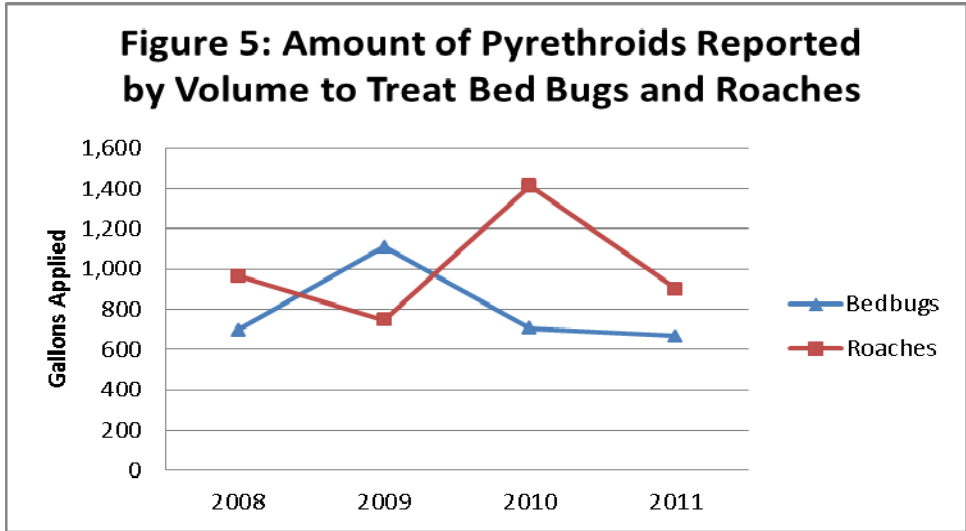

By looking at the number of applications reported by either weight or volume (Figure 4), an even clearer picture appears to suggest more applications are being done with pyrethroids than with “Best Management Products” in recent years. These trends may be the result of long term improvement in persistent pest problems through more effective control by “Best Mangement Products”, or a move back to residual spray pyrethroids for roach control. Further investigations would be needed to detertmine the cause of these changes.

Bed Bugs vs. Roaches

Looking at pyrethroid spray products by volume targeting roaches, the use of these products increased by 89% from 2009 to 2010 and then declined by 36% from 2010 to 2011 (Figure 5). Figure 5 also shows the amount in gallons of pyrethroids used by city agencies to treat bed bugs. There was a 5% reduction from 2010 to 2011 by volume after a 36% decline from 2009 to 2010 of pyrethroid pesticides reported by volume used to treat for bed bugs (Figure 5). The volume of pyrethroids used to treat roaches increased in 2010 mainly due to a higher proportion of applications with higher application rates (quantity used per application) during that year by NYCHA and the Department of Parks and Recreation. The volume of pyrethroids for roaches decreased from 2010-2011 (Figure 5), while the number of applications has continued to increase (Figure 4). Citywide, 9% of all pesticide application and 15% of all insecticide application were to treat bed bugs (Table 3 and Table 1).

Rodents

Rodenticide use has fluctuated year to year with no clear trend. Year to year changes are due in part to the timing of neighborhood rat indexing activity.

Mosquitoes

The DOHMH MNV Vector Control program applied 59,174 pounds of larvicide and 700 pounds of adulticide in 2011. This was a 24% increase in larvicide reported by weight from 2010 (Figure 1). This is the first increase after declining amounts since 2008. A reduction in the number of aerial applications contributed to the 49% decline in amounts applied between 2008 and 2010. The amount of adulticide required to be applied by DOHMH has been quite variable from year to year depending on the weather and severity of mosquito populations around the city. However, the amount of adulticide per application has remained very consistent (data not shown).

D. SUMMARY OF AGENCIES’ PESTICIDE USE

For each reporting agency, we summarize below total pesticide use by pesticide type, followed by a listing of pesticide products used and their total use by reporting City agencies.

Administration for Children’s Services

The New York City Administration for Children’s Services (ACS) provides for the protection of New York City’s children from abuse and neglect. Along with their community partners, Children’s Services provides neighborhood-based services to help ensure children grow up in safe, permanent homes with strong families. The agency contracts for pest management services. No data was received for ACS in 2011.

Aging

The Department for the Aging (DFTA) promotes, administers and coordinates the development and provision of services for older New Yorkers to help them maintain their independence and participation in their communities. It contracts with non-profit senior service providers to administer 76 different city-owned and city-leased sites, 33 of which engage in food preparation or storage. These facilities are privately operated and contract individually with private vendors for pest control to address typical structural urban pest issues, such as roaches, rodents, and flies. Pesticide use arranged by privately operated facilities by their subcontractors is not required to be reported and is not included in this report, which includes only pest management services contracted directly by DFTA. Table 4 summarizes pesticide use by pesticide type. Table 5 lists all pesticide products used by DFTA in 2011.

Table 4: Types of Pesticides Used by DFTA in 2011

Pesticide Type	Volume		Weight		Times Applied	
	Gallons	% of Total	Pounds	% of Total	Number	% of Total

Board of Elections

The Board of Elections is the administrative body that oversees elections through its staff at its main and five borough offices. The agency contracts for pest management services. No data was received for BOE in 2011.

Brooklyn Public Libraries

The Brooklyn Public Library (BPL) serves Brooklyn's 2.5 million residents, offering thousands of public programs, millions of books and use of more than 850 free Internet-accessible computers at its 66 locations. Contractors are hired for pest management as needed

and the major pest infestations are roaches and mice. Table 6 summarizes pesticide use by pesticide type. Table 7 lists all pesticide products used by BPL in 2011.

Table 6: Types of Pesticides Used by BPL in 2011

Chief Medical Examiner

The Office of Chief Medical Examiner (OCME) is responsible for investigating deaths in unusual circumstances, where an application for cremation is made, provides additional forensic services to support criminal investigations and manages all functions of the City mortuary. The agency contracts for pest management services. No data was received for OCME in 2011.

City University of New York

The City University of New York is the nation's largest urban public university and is comprised of 23 institutions. The University serves more than 260,000 degree-credit students and 273,000 adult, continuing and professional education students. Individual institutions contracts for pest control services through private vendors. The data reported is information received from 13 colleges, Borough of Manhattan Community College, Bronx Community College, City College, College of Technology, The Graduate Center, Hostos Community College, John Jay College, Kingsborough Community College, La Guardia Community College, Lehman College,

Medgar Evers College, Queens Borough Community College, and York College. Table 8 summarizes pesticide use by pesticide type. Table 9 lists all pesticide products used by CUNY in 2011.

Citywide Administrative Services

The Department of Citywide Administrative Services (DCAS) supports government recruitment, oversees surplus city-owned property and the commercial real estate portfolio for the City and provides supplies and equipment. Of the 14,000 city-owned lots, DCAS is directly responsible for the management of approximately 2,400 of these properties. DCAS cleans and maintains 53 DCAS-managed buildings with 13,365,398 square feet of space throughout the city. These include City Hall, the four Borough Halls, the Manhattan and Brooklyn Municipal Buildings, and all state and municipal court buildings. DCAS managed the city-wide contract for pest management services which city agencies used until 2010 when it ended. DCAS since then has contracted for pest management services only for its managed facilities. Beginning May 1, 2012 DCAS will once again be managing a new city-wide contract which agencies will again be able to buy into. Several agencies are housed in DCAS managed buildings and the report submitted reflects these applications. Table 10 summarizes pesticide use by pesticide type. Table 11 lists all pesticide products used by DCAS in 2011.

Consumer Affairs

The Department of Consumer Affairs (DCA) is responsible for enforcing the city's consumer protection laws, licensing businesses, dealing with consumer complaints, and participating in consumer education. It ensures that New York City's consumers and businesses benefit from a fair and vibrant marketplace. DCA contracts for pest management services for its managed buildings. Table 12 summarizes pesticide use by pesticide type. Table 13 lists all pesticide products used by DCA in 2011.

Corrections

The Department of Corrections (DOC) is responsible for New York City's inmates, housing the majority of them on Riker's Island. It oversees 44 facilities, including ten correctional facilities that have food preparation areas, laundries, residential areas for inmates, and office space. DOC does not employ contractors for pest management purposes, but relies on in-house pest control professionals and works with DCAS and HHC in maintaining certain facilities. Table 14 summarizes pesticide use by pesticide type. Table 15 lists all pesticide products used by DOC in 2011.

Table 14: Types of Pesticides Used by DOC in 2011

Education

The Department of Education (DOE) provides primary and secondary education to over 1 million pre-kindergarten to grade 12 students. Pest management at all New York City public schools is overseen by their Pest Control Unit. There are nineteen in-house licensed pest management professionals that conduct monthly monitoring inspections and respond to pest problems for approximately 900 schools. DOE contracts with several pest management companies to additionally provide services for an additional 300 schools. Table 16 summarizes pesticide use by pesticide type. Table 17 lists all pesticide products used by DOE in 2011.

Environmental Protection

The Department of Environmental Protection (DEP) has over 1,700 facilities upstate and downstate. These include water pollution control plants, well stations, pumping stations, shafts, chambers, reservoirs, aqueducts, tunnels, gate houses, office space, garages, repair shops, maintenance shops, and police precincts within New York City. DEP contracts for some pest control services and employ approximately 20 licensed applicators for upstate reservoir pest control. Table 18 summarizes pesticide use by pesticide type. Table 19 lists all pesticide products used by DEP in 2011.

Table 18: Types of Pesticides Used by DEP in 2011

Finance

The Department of Finance (DOF) collects City revenues, ensures compliance with City tax and other revenue laws, evaluates all real property in the City, provides a forum for the public to dispute tax and parking violation liability, and maintains property records. The agency contracts for pest management services. No data was received for DOF in 2011.

Fire Department

The Fire Department of New York City (FDNY) is responsible for the protection against fires and fire hazards and providing emergency medical services, technical rescue and response to various biological, chemical and radioactive hazards. It manages some 350 facilities throughout the City and contracts for pest control services. Table 20 summarizes pesticide use by pesticide type. Table 21 lists all pesticide products used by FDNY in 2011.

Health and Hospitals Corporation

The New York City Health and Hospitals Corporation (HHC) oversees eleven hospitals, six diagnostic and treatment centers, 82 community health and school-based clinics, and five long-term care/specialty hospital and nursing home facilities. Because each facility is managed separately, pest control protocols differ among facilities. A few facilities have pest control

professionals on staff, but the majority relies on outside contractors. Table 22 summarizes pesticide use by pesticide type. Table 23 lists products by pesticide types.

Table 22: Types of Pesticides Used by HHC in 2011

Health and Mental Hygiene

The Department of Health and Mental Hygiene (DOHMH) protects and promotes the health and mental well being of all New Yorkers. The Bureau of Veterinary and Pest Control Services at DOHMH protects the public from animal- and vector-borne diseases and other hazards, including those that result from uncontrolled or unregulated rodents and other animals, and from mosquito-borne pathogens. Two programs, Pest Control Services (PCS) and Vector Surveillance and Control (VSC) have pest management responsibilities. PCS focuses on rodent control – performing inspections, cleanups and treatments of both private and public property.

Currently, PCS employs twenty exterminators to bait properties that have signs of active rodents with rodenticide placed either directly in rat burrows or in tamper resistant bait stations. Pest management in facilities operated by the DOHMH is done through private contractors. Though Local Law 37 requires the reporting of pesticide use on only public property, applications on private property done by PCS are included in Tables 24 and 25. VSC is charged with mosquito management. Table 24 summarizes pesticide use by pesticide type. Table 25 lists all pesticide products used by DOHMH in 2011.

Homeless Services

The Department of Homeless Services (DHS) manages homeless shelters and dormitory facilities across the City. Of these, six are Family Services operated, five provide dormitory facilities for families with children and one facility, Preventative Assistance and Temporary Housing (PATH), is an intake facility. There are five adult facilities which also provide housing

for men. DHS also operates and manages warehouses. Pest management services, which primarily address rodent and cockroach infestations, are provided by an outside contractor. Table 26 summarizes pesticide use by pesticide type. Table 27 lists all pesticide products used by DHS in 2011.

Housing Authority

The New York City Housing Authority (NYCHA) manages 2,644 residential buildings and 178,466 apartments, as well as office space and grounds that cover 2,502 acres. NYCHA currently has a staff of some 75 pest management professionals that perform routine inspections and treatments, carry out specialized intensive IPM interventions, apply pesticides, and respond to complaints and requests from other agencies. NYCHA staff members regularly address a range of insect and rodent problems, including interior mice, cockroaches and bedbugs and exterior rats, weeds, and mosquito control. Table 28 summarizes pesticide use by pesticide type. Table 29 lists the products used by NYCHA in 2011.

Housing Preservation and Development

Housing Preservation and Development (HPD) oversees occupied and vacant residential and commercial buildings, vacant lots as well as a limited number of agency offices. In addition, its Emergency Repair Program occasionally encounters and responds to rats and fleas in occupied private buildings. There are no certified applicators on staff and the agency contracts for pest management services. Table 30 summarizes pesticide use by pesticide type. Table 31 lists all pesticide products used by HPD in 2011.

Table 30: Types of Pesticides Used by HPD in 2011

Juvenile Justice

The Department of Juvenile Justice (DJJ) operates three secure detention and 17 non-secure detention facilities located throughout the City that admit over 5,000 youth each year. The department was officially merged with Administration for Children's Services at the end of 2010. DJJ contracts out its pest management services. No data was received for DJJ in 2011.

New York Public Libraries

The New York Public Library (NYPL), through its 85 branches libraries services residents in the boroughs of Manhattan, the Bronx and Staten Island. Pest management is provided by private contractors. No data was received for NYPL in 2011.

Parks and Recreation

New York City's has 28,000 acres of parks, playgrounds, athletic fields, natural areas, recreational facilities, comfort stations, beaches, historic buildings, and parkways maintained by the Department of Parks and Recreation (DPR). The major pest issues facing DPR are weeds (including weed shrubs and weed trees) and rodents. Rarer infestations of exotic insect pests and diseases, often targeting trees, also occur. To address these, DPR employs 104 certified pesticide applicators. Herbicides account for the largest share of DPR's total pesticide use. Contractors are hired for pest management when peripheral rodent problems arise on capital projects.

This data includes pesticides applied on all city-owned golf courses. Local Law 37 exempts these locations from pesticide prohibitions. The table also includes the data from sister organizations that operate on DPR property such as zoos, conservancies, and botanic gardens. Table 32 summarizes pesticide use by pesticide type. Table 33 below lists for each pesticide type, all products used, unless there were more than 10, in which case the 10 most frequently applied products are listed. Appendix 2 includes a complete product listing for DPR.

Table 32: Types of Pesticides Used by DPR in 2011

Payroll Administration

The Office of Payroll Administration (OPA) is charged with administering the City's payroll and ensuring prompt and accurate payment of employees' wages and salaries. The agency contracts for pest management services. No data was received for OPA in 2011.

Police Department

The Police Department (NYPD) is committed to providing a safe and secure environment for the public. It manages 76 precincts, 12 Transit Districts, and nine Housing Police Service Areas and other investigative and specialized units. The major pest issues facing its facilities are structural pests and are managed by private contractors as needed. Table 34 summarizes pesticide use by pesticide type. Table 35 lists all pesticide products used by NYPD in 2011.

Probation

The New York City Department of Probation is charged with protecting the community by intervening in the lives of offenders, holding them accountable and serving as a catalyst for positive change. In collaboration with the community and other justice partners they provide information and services to the courts, give victims a voice in the justice system, and help strengthen families. The agency contracts for pest management services. No data was received for DOP in 2011.

Queens Public Libraries

The Queens Public Library (QPL) manages 64 libraries as well as indoor, outdoor and office facilities. Contractors are hired for pest management as needed and the major pest infestations are roaches and mice. No data was received for QPL in 2011.

Sanitation

The Department of Sanitation (DSNY) manages garages, office buildings, transfer stations, and various publicly-owned lots throughout the city. DSNY employs two certified pesticide applicators that make routine visits to facilities and responds to emergency calls because of the nature of the agency's work – managing garbage – pest problems are endemic at some facilities. DSNY also contracts for weed control on some of the City's rights-of-way. DSNY began entering data from staff into our NYCPURS system in 2010. Table 36 summarizes pesticide use by pesticide type. Table 37 lists the products used by DSNY.

Table 36: Types of Pesticides Used by DSNY in 2011

Taxi and Limousine Commission

The Taxi and Limousine Commission (TLC) licenses and regulates over 50,000 vehicles and approximately 100,000 drivers, performs safety and emissions inspections of the more than 13,000 medallion taxicabs three times each year, and holds numerous hearings for violations of City and TLC rules and regulations, making it the most active taxi and limousine licensing regulatory agency in the United States. No data was received for TLC in 2011.

Transportation

The Department of Transportation (DOT) has a staff of over 4,000 that oversees one of the most complex urban transportation networks in the world. They manage approximately 5,800 miles of streets, sidewalks, and highways and 789 bridge structures, including six tunnels. They operate the Staten Island Ferry, oversee ferry operations on City-owned piers and operate approximately 75 facilities throughout the City. DOT is responsible for pest management at maintenance yards, lots, and agency offices throughout the city, as well as on rights-of-way along city highways. DOT is also contracted by New York State to provide right-of-way maintenance on state highways within city borders. Table 38 summarizes pesticide use by pesticide type. Table 39 lists all pesticide products used by DOT in 2011.

Table 38: Types of Pesticides Used by DOT in 2011

Youth and Community Development

The Department of Youth and Community Development (DYCD) provides the City of New York with high-quality youth and family programming. The central task of DYCD is administering available City, state, and federal funds to effective community-based organizations. No pesticide applications were made by DYCD in 2011.
