

What's Going On Here?

We're installing new sewer lines as part of the East Side Coastal Resiliency (ESCR) project. The new lines will expand drainage capacity to better protect the community from flooding.

We're also relocating and upgrading existing sewer lines to create space for the foundations of the new E. 10th Street pedestrian bridge, which is expected to be installed in 2025.

Most of the infrastructure we're replacing is at least 50 years old! Because the sewer system sits beneath other utilities, excavations for this work are big undertakings. Thank you for your patience as we make these critical upgrades!

This work is part of the ESCR project's Project Area 1 contract, SANDRESM1.

Visit the ESCR website, nyc.gov/escr, to sign up for weekly Construction Bulletins, Community Advisories, and other project communications.
