New York City Government Property Energy Benchmarking Results Calendar Year 2023

Overview

The Department of Citywide Administrative Services (DCAS) submitted benchmarking results for City government properties for calendar year 2023 to the Department of Finance (DOF) for publication on September 1, 2024, in compliance with Local Law 84 of 2009 (LL84). Since 2009, DCAS has coordinated with City agencies each year to benchmark nearly 3,000 public properties including libraries, police stations, firehouses, schools, colleges, courthouses, hospitals, community centers, and government offices.

The following report discloses energy performance metrics for calendar year 2023 for City government properties that are covered by LL84. It also includes data from calendar year 2010, which was published in the original New York City Government Building Energy Benchmarking Results, as required by LL84. The performance metrics included in the report are: [ENERGY STAR score, energy use intensity \(EUI\), and greenhouse gas \(GHG\) emissions intensity](#). The U.S. EPA ENERGY STAR Portfolio Manager Tool calculates ENERGY STAR scores for certain common property types. For property types that are ineligible for an ENERGY STAR score, or for which property or energy consumption data was not available, the report indicates “Not Available.”

As a result of a rule change¹ issued by the NYC Department of Buildings (DOB), City government properties were benchmarked differently starting calendar year 2021. Previously, when multiple buildings were located on the same tax lot and/or shared a utility meter, they were benchmarked as a single property with all energy and square footage data from the individual buildings aggregated to this single benchmarked property. Starting in 2022, data for each individual building that met these criteria was directly entered into Portfolio Manager and a “parent property” was created to aggregate the data from the group of individual buildings (also known as a “benchmarking group”). The aggregated data for the parent property was used by Portfolio Manager to generate EUIs and ENERGY STAR scores, wherever applicable, and these metrics were then associated back to each individual building within the benchmarking group.² As such, the dataset enclosed with this report includes all buildings that were entered into Portfolio Manager; buildings that were part of benchmarking groups have received the EUIs and Energy Star Scores, if applicable, that were generated for the parent properties of their benchmarking group.

¹ [§ 103-06 Benchmarking Energy and Water Use](#)

² Note that, with the change in benchmarking procedure, not all buildings that are part of benchmarked groups are eligible for an ENERGY STAR score, though most receive an EUI and GHG emissions intensity.

Summary of Results

The average ENERGY STAR score for eligible City properties in calendar year 2023 was 63, which is 5% higher as in 2010³, the first year of benchmarking City properties. The average Source EUI in 2023 was 143.1 kBtu/ft² and the average GHG intensity was 6.3 kgCO₂e/ft², both of which improved from 2010, by 15% and 2% respectively. Please see Table 1 for additional detail.⁴

Table 1: Comparison of Benchmarking Results, 2023 vs 2010*

Years	Average ENERGY STAR Score	# of Properties ³	Average EUI (kBtu/ft ²)	# of Properties ³	Average GHG Intensity (kgCO ₂ e/ft ²)	# of Properties ³	Cooling Degree Days (CDD)	Heating Degree Days (HDD)	Total Degree Days
2010	60	1,202	169.1	1,696	6.4	1,704	1,712	4,227	5,939
2023	63	1,395	143.1	2,116	6.3	2,135	1,215	3,930	5,145
% Change	5%	16%	-15%	25%	-2%	25%	-29%	-7%	-13%

For additional information on these benchmarking results, contact NYC DCAS Energy Management at energy@dcas.nyc.gov.

³ ENERGY STAR scores are not always directly comparable from year-to-year, as reporting procedures and methodologies are frequently updated in EPA Portfolio Manager. Note that the population of properties included in the reporting dataset for 2010 may not be the same as in 2023.

⁴ To facilitate a one-to-one comparison between benchmarking results for 2010 and 2023, the 2023 reporting dataset includes properties that were benchmarked individually (i.e., where there is only one building on a BBL) and the parent properties for any benchmarking groups (i.e., where multiple buildings share a BBL and/or share energy). Properties belonging to benchmarking groups were not included so as to not be double-counted, since these properties take the ENERGY STAR score and other metrics of the parent record.

* Data used to generate this report is collected and reported by City operating agencies. The information in this report is subject to change due to data quality improvements, energy efficiency efforts, and changes in building use over time.

* 2010 data as published in 2013 New York City Government Building Energy Benchmarking Results.

* Score of "Not Available" indicates building use types for which the EPA Portfolio Manager (EPA PM) does not provide an ENERGY STAR score.

* Source EUI and GHG Emissions Intensity calculations performed by U.S. Environmental Protection Agency (EPA) methodology with EPA greenhouse gas emissions factors.

* Data used to generate this report is collected and reported by City operating agencies. The information in this report is subject to change due to data quality improvements, energy efficiency efforts, and changes in building use over time.

* 2010 data as published in 2013 New York City Government Building Energy Benchmarking Results.

* Score of "Not Available" indicates building use types for which the EPA Portfolio Manager (EPA PM) does not provide an ENERGY STAR score.

* Source EUI and GHG Emissions Intensity calculations performed by U.S. Environmental Protection Agency (EPA) methodology with EPA greenhouse gas emissions factors.
