Health Department Clinics .																		Health Dept. Clinics .	

**Includes tuberculous and not tuberculous cases. †Diagnostic and pneumothorax services. ‡Jointly operated clinics. §W.P.A. project for case findings. ¶For pneumothorax treatment only. Stage of disease not available for these patients; they are visited by the nurses covering districts in which patients reside. #No clinic within district. ††Health Department reports to the Association do not contain separate information on cases found "arrested" on admission though information may be had of the total of such cases under supervision at each clinic. †††Exclusive of 457 interviews with nurses at the pneumothorax services and 29,961 at the diagnostic services in 1938, and 560 and 27,585 respectively in 1937. ††††Difference in Branch Office register and number of patients remaining on December 31, 1938, is due to retention of "arrested" cases in clinic files whereas Health Department registration roster excludes these cases. †††††At end of year 1,422 patients were under pneumothorax treatment; 331 at Health Department Clinics, 927 at Department of Hospital Clinics, and 164 at private hospital clinics. NOTE: In addition to figures in this statement showing volume of tuberculosis clinic work, there were, in the thirteen Consultation Services (ten operated by Health Department and three by Queensboro Tbc. and Health Ass'n) maintained for private physicians' cases 9,959 new admissions, 1,359 new cases diagnosed - 390 minimal, 424 moderately advanced, 368 far advanced, 157 non-pulmonary; 10,837 treated; 12,592 visits to these services; and 11,248 x-ray examinations of these patients.
