Note: The Public Health Service states that "Tuberculosis registers usually include records of the active cases currently under care, the cases for which disease activity has not been determined, and inactive cases under supervision. In many instances, cases are carried on registers for a considerable length of time before disease activity is established. For a number of reasons, other cases are also retained on the Health Department rolls. These include records of people who fail to respond to treatment, or who have received inadequate or interrupted treatment".

† Care should be taken in making international comparisons of tuberculosis morbidity and mortality rates. Reporting of new cases is not done with the same degree of completeness or accuracy in each place. Also criteria used as to what constitutes a "new case" differ. However, for a particular country the local practice is probably fairly consistent and the annual records within the same country, for a relatively short period, may be comparable.
