#### **TECHNICAL MEMORANDUM**

TO: NYCDCP

FROM: Philip Habib & Associates

DATE: March 31, 2017

PROJECT: East Harlem Rezoning EIS (PHA No. 1223E)

RE: Transportation Planning Factors and Travel Demand Forecast

This memorandum summarizes the transportation planning factors to be used for the analyses of traffic, parking, transit, and pedestrian conditions for the *East Harlem Rezoning EIS*. Estimates of the peak travel demand for the Proposed Actions' reasonable worst-case development scenario (RWCDS) are provided, along with a discussion of trip assignment methodologies and study area definitions.

#### THE PROPOSED ACTIONS

The New York City Department of City Planning (DCP), together with the Department of Housing Preservation and Development (HPD), are proposing a series of land use actions (collectively the "Proposed Actions") in response to the recommendations of the East Harlem Neighborhood Plan, which is the subject of an ongoing community process, to create opportunities for housing, including affordable housing, community facilities, economic development and other services in an approximately 115-block area of the East Harlem neighborhood of Manhattan, Community District 11. The Project Area within East Harlem is generally bounded by East 104<sup>th</sup> Street to the south, East 132<sup>nd</sup> Street to the north, Park and Fifth avenues to the west and Second Avenue to the east (see **Figure 1**). Within this area, the Proposed Actions are anticipated to facilitate new residential, commercial and community facility development.

#### THE REASONABLE WORST CASE DEVELOPMENT SCENARIO (RWCDS)

In order to assess the potential effects of the Proposed Actions, a RWCDS for both "future without the proposed actions" (No-Action) and "future with the proposed actions" (With-Action) conditions is analyzed for an analysis year of 2027. To develop a reasonable estimate of future growth, likely development sites were identified and divided into two categories: projected development sites and potential development sites. The projected development sites are those considered more likely to be

#### Project Area and RWCDS Projected Development Sites

developed within the 10-year analysis period for the Proposed Actions (i.e., by the 2027 analysis year), while potential sites are considered less likely to be developed over the same period. While a total of 68 projected development sites were identified for the Proposed Actions (see **Figure 1**), the RWCDS assessed in this technical memorandum includes one additional site—the Sendero Verde project (Site 70)—as a worst-case scenario for the purposes of identifying potential analysis locations. **Table 1** shows the total anticipated No-Action and With-Action land uses on the 69 projected development sites in 2027 under the RWCDS. As shown in **Table 1**, the Proposed Actions are expected to generate a net increase of 4,143 dwelling units (DU), 284,331 square feet (sf) of commercial space, 129,845 sf of community facility space, a 600-seat charter high school, 51,369 sf of community center (non-profit health club) space, and 98,255 sf of research laboratory space. There would also be a net decrease of 10,884 sf of local retail space, 32,974 sf of hotel space, 10,592 sf of auto repair space, and 23,475 sf of light industrial space which includes wholesale/warehousing, storage and manufacturing uses.

#### TRANSPORTATION PLANNING FACTORS

The transportation planning factors used to forecast travel demand for the RWCDS land uses are summarized in **Table 2** and discussed below. The trip generation rates, temporal distributions, modal splits, vehicle occupancies, and truck trip factors for each potential land use were primarily based on those cited in the 2014 *City Environmental Quality Review (CEQR) Technical Manual*, factors developed for recent environmental reviews, 2010-2014 American Community Survey (ACS) journey-to-work data, AASHTO CTPP reverse journey-to-work 5-year data (2006-2010), and data from other standard professional references. Factors are shown for the AM and PM peak hours (typical peak periods for commuter travel) and the midday and Saturday peak hours (typical peak periods for retail demand).

#### Retail

The trip generation rates and temporal distributions for local and destination retail uses were based on data from the *CEQR Technical Manual*. The local retail modal split was based on survey data provided by the New York City Department of Transportation (NYCDOT), the directional in/out splits and vehicle occupancy rates were based on the *West Harlem Rezoning FEIS* (2012), and truck trip factors were based on data from the *CEQR Technical Manual*. The modal and directional in/out splits, vehicle occupancy rates and truck trip factors for destination retail uses were based on data from the *East 125<sup>th</sup> Street Development FEIS* (2008). To reflect the large scale of the Project Area, it was assumed that 40 percent of all local retail trips would be linked trips. Factors for the supermarket use were derived from data from *The Food Retail Expansion to Support Health (FRESH) Food Store Program* (2009). It should be noted that this source cited a weekday trip rate of 205 trips per 1,000 gsf but no rate for Saturday. A Saturday trip rate of 271 trips/1,000 gsf (32 percent higher than the weekday rate) was therefore assumed based on the ratio of the weekday/Saturday trip rates (175 trips per 1,000 gsf/231 trips per 1,000 gsf) for a general supermarket cited in the *CEQR Technical Manual*.

-

<sup>&</sup>lt;sup>1</sup> Projected development sites under the Proposed Actions are numbered 1 through 69; however, Site 34 was subsequently re-categorized as a potential site and is therefore not included in the transportation analyses.

<sup>&</sup>lt;sup>2</sup> A RWCDS that includes the Sendero Verde project is assessed in the Alternatives Chapter of the EIS.

#### Notes:

#### **Non-Retail Commercial Uses**

Non-retail commercial land uses include office, restaurant, hotel and auto repair uses. As shown in **Table 2**, the factors used to forecast travel demand from these uses were developed from a variety of sources, including the *CEQR Technical Manual*, the *West Harlem Rezoning FEIS*, the *East New York Rezoning FEIS* (2016), the *Vanderbilt Corridor and One Vanderbilt FEIS* (2015), the *Broadway Triangle FEIS* (2009) and AASHTO CTPP reverse journey-to-work data for workers in census tracts encompassing East Harlem (Manhattan Census Tracts 166, 168, 170, 172, 174.01, 174.02, 180, 182, 184, 188, 194, 196, 198, 206, and 242). A linked-trip credit of 25 percent was assumed for the restaurant use in the midday period and 15 percent in the PM and Saturday periods, consistent with the *Vanderbilt Corridor and One Vanderbilt FEIS*.

<sup>&</sup>lt;sup>1</sup> The Sendero Verde project (Site 70) is included as a worst-case scenario for preliminary transportation planning purposes.

<sup>&</sup>lt;sup>2</sup> Undefined community facility space is assumed to be medical office use for planning purposes. Excludes approximately 1,189 sf of garden storage space in the With-Action condition that would generate minimal incremental travel demand.

<sup>&</sup>lt;sup>3</sup> Includes 9,817 sf of wholesale/warehousing uses, 57,614 sf of storage uses and 12,960 sf of manufacturing uses.

<sup>&</sup>lt;sup>4</sup> Includes 24,516 sf of wholesale/warehousing uses and 32,400 sf of manufacturing uses.

<sup>&</sup>lt;sup>5</sup> Conservatively assumes that 30 percent of DUs would be designated as affordable and would therefore not require accessory parking under Mandatory Inclusionary Housing. <sup>6</sup> One-half (49,128 sf) of the research laboratory space is assumed to function as office space and is included in the office total for travel demand forecasting purposes.

#### **TABLE 2: Transportation Planning Factors (continued)**

Notes

- (1) Based on data from City Environmental Quality Review (CEQR) Technical Manual, 2014. Health club rates assumed for community center trip generation and temporal distributions rates.
- (2) Based on data from West Harlem Rezoning FEIS, 2012
- (3) Based on AASHTO CTPP Reverse Journey to Work 5-Year (2006-2010) data for Manhattan Census Tracts 166, 168, 170, 172, 174.01, 174.02, 180, 182, 184, 188, 194, 196, 198, 206, and 242.
- (4) Based on data from East 125th Street Development FEIS, 2008.
- (5) Based on American Community Survey Journey to Work 5-Year (2010-2014) data for Manhattan Census Tracts 166, 168, 170, 172, 174.01, 174.02, 180, 182, 184, 188, 194, 196, 198, 206, and 242.
- (6) Midday and Saturday vehicle occupancy determined by applying a multiplier (1.4) to the AM/PM rate.
- (7) Based on data from Vanderbilt Corridor and One Vanderbilt FEIS, 2015
- (8) Assumes similar modal split as that assumed for a local retail use.
- (9) Supermarket rates based on data from The Food Retail Expansion to Support Health (FRESH) Food Store Program, 2009
- (10) Assumes a 32% increase in peak hour trips on Saturday; based on ratio between weekday and Saturday rates for supermarket use provided by the CEQR Technical Manual, 2014.
- (11) Assumes for Saturday the same temporal distribution, modal split, directional split, and vehicle occupancy as the weekday midday.
- (12) Based on data from Broadway Triangle FEIS, 2009.
- (13) Assumes similar modal split as that assumed for a office use.
- (14) Based on data from Jamaica Plan Rezoning FGEIS, 2007
- (15) Based on data from Saint Vincent's Campus Redevelopment FEIS, 2012.
- (16) Assumes similar weekday midday and Saturday temporal distribution as that assumed for a office use.
- (17) Derived using data from NYCDOT Trip Generation and Mode Choice Survey.
- (18) Based on data from East New York Rezoning Proposal FEIS, 2015.
- (19) Assumes similar transportation planning factors as those assumed for light industrial use.
- (20) Based on data from the Atlantic Yards Arena and Redevelopment FEIS, 2006
- (21) Based on data from the ECF East 96th Street DEIS, 2017. All student auto trips assumed to be pick-up/drop-off

#### **Community Facility**

For transportation planning purposes it was assumed that undefined community facility uses developed on the projected development sites under the RWCDS in the No-Action and With-Action conditions would consist primarily of medical office space. As shown in **Table 2**, the factors used to forecast travel demand from this land use were derived from the *Jamaica Plan Rezoning FGEIS* (2007), the *St. Vincent's Campus Redevelopment FEIS* (2012), and AASHTO CTPP reverse journey-to-work data for workers in census tracts encompassing East Harlem.

#### **Community Center**

For transportation planning purposes, the community center space included in the RWCDS is assumed to be comprised of non-profit health club uses. The trip generation rate and temporal distribution for these uses were based on data from the *CEQR Technical Manual*. All other factors were based on data from the *West Harlem Rezoning FEIS* (2012).

#### **Charter High School**

The trip generation rates and temporal distributions for the charter high school use were based on data from the CEQR Technical Manual. Modal splits, directional distributions and vehicle occupancies were based on AASHTO CTPP reverse journey-to-work data for workers in census tracts encompassing East Harlem and data from the ECF East 96th Street DEIS (2017). All student auto trips were assumed to be pick-up/drop-off. Truck trip factors were based on data from the East New York Rezoning Proposal FEIS (2015).

#### Light Industrial/Warehouse/Storage/Research Laboratory

The trip generation rates, temporal distributions, directional in/out splits, and vehicle occupancies for manufacturing, wholesale/warehousing, storage and research laboratory uses were based on data from the *Broadway Triangle FEIS*, and the modal splits were based on data from the *East New York Rezoning FEIS* and AASHTO CTPP reverse journey-to-work data for workers in the census tracts encompassing East Harlem. Truck trip generation rates and temporal distributions for light industrial uses were based on data from the *Broadway Triangle FEIS*.

#### Residential

Residential person trip and truck trip generation rates and temporal distributions reflect those cited in the *CEQR Technical Manual*. The directional in/out splits were based on data from the *West Harlem Rezoning FEIS* while the modal splits were derived from 5-year ACS journey-to-work data for census tracts encompassing East Harlem (Manhattan Census Tracts 166, 168, 170, 172, 174.01, 174.02, 180, 182, 184, 188, 194, 196, 198, 206, and 242). *Vehicle occupancies for residential uses were also derived from 2010-2014 5-year ACS journey-to-work data along with data from the West Harlem Rezoning FEIS*.

It should be noted that ACS vehicle occupancy data reflect the average vehicle occupancy for personal auto trips to and from work, and do not present the complete picture of average vehicle occupancy for other purposes (e.g., shopping, errands, social and recreational activities, school trips, etc.). In general, vehicle occupancy rates for non-work-related trips have been found to be higher than vehicle occupancy rates for work-related trips. Both national data from USDOT-FHA's *Summary of Travel Trends: 2009 National Household Travel Survey* and regional data from the *Regional Travel-Household Interview Survey* prepared for the New York Metropolitan Transportation Council (NYMTC) and the North Jersey Transportation Planning Authority (NJTPA) indicate that average vehicle occupancy rates for all auto trips are over 1.4 times the average vehicle occupancy rates for auto trips to and from work.<sup>3</sup> As such, the weekday AM/PM peak hour vehicle occupancy rates derived from the ACS data were adjusted by a factor of 1.4 for the weekday midday and Saturday midday peak hours to reflect the predominance of non-work-related trips during these periods. While not all AM and PM peak hour trips are work-related, the lower vehicle occupancy rates for trips to and from work were conservatively applied to all auto trips in these latter peak hours.

Although residential-based trips in the weekday midday and Saturday peak hours would likely be more local in nature than in the commuter peak hours (and therefore have a higher walk share, for example), the modal splits based on the ACS journey-to-work data were conservatively assumed for all periods.

<sup>&</sup>lt;sup>3</sup> Source: Table 16 of the USDOT-FHA's 2009 *National Household Travel Survey* and pages 20 and 21 of NYMTC/NJTPA 2000 *Regional Travel – Household Interview Survey*. (See **Appendix A**.)

#### TRIP GENERATION

The net incremental change in person and vehicle trips expected to result from the Proposed Actions by the 2027 analysis year was estimated based on the net change in land uses shown in Table 1 and the transportation planning factors shown in Table 2. (As noted previously, for the purposes of identifying potential analysis locations, the travel demand forecasts in this technical memorandum conservatively include the Sendero Verde project as part of the Proposed Actions' RWCDS.) Table 3 shows an estimate of the net incremental change in peak hour person trips and vehicle trips (versus the No-Action condition) that would occur in 2027 with implementation of the Proposed Actions. As shown in Table 3, under the RWCDS, the Proposed Actions would generate a net increase of approximately 5,486 person trips (in + out combined) in the weekday AM peak hour, 4,438 in the weekday midday, 7,102 in the weekday PM peak hour, and 6,188 in the Saturday peak hour. Peak hour vehicle trips (including auto, truck, and taxi trips balanced to reflect that some taxis arrive or depart empty) would increase by a net total of approximately 665, 479, 729, and 446 (in + out combined) in the weekday AM, midday, and PM, and Saturday peak hours, respectively. Peak hour subway trips would increase by a net total of 3,028, 1,534, 3,443 and 2,492 during these periods, respectively, while bus trips would increase by approximately 760, 391, 880, and 672, respectively. Lastly, walk-only trips would increase by 1,054, 2,014, 2,019, and 2,382 trips during the weekday AM, midday, and PM, and Saturday peak hours, respectively.

The Proposed Actions are expected to generate relatively few (i.e., less than 100) trips by commuter rail at the Metro-North Railroad 125<sup>th</sup> Street station in any one peak hour. As some Metro-North trips would also likely start or end on another mode of transit, commuter rail trips were conservatively included in the totals for the subway mode in the travel demand forecast shown in **Table 3**.

Table 4 shows the net incremental change in peak hour vehicle trips (auto, school bus, taxi and truck) that would be generated by each individual projected development site during the weekday AM, midday and PM and Saturday peak hours.<sup>4</sup> Overall, Site 70 (the Sendero Verde project) would generate the greatest number of new vehicle trips in all peak hours, accounting for approximately 22 to 27 percent of the total vehicle trips generated by the Proposed Actions in each period. The next highest number of trips would be generated by site 4 which would account for six to 16 percent of total trips, followed by site 11 which would account for seven to 13 percent. Under the RWCDS, there would be net decreases in vehicle trips during one or more peak hours at 10 sites, primarily due to reductions in local retail uses, but also due to reductions in auto repair space (site 1), hotel space (site 5), light industrial space (site 13), and medical office space (site 28) in the With-Action condition.

-

<sup>&</sup>lt;sup>4</sup> Detailed travel demand forecasts for each projected development site are provided in **Appendix B**.

\_

<sup>&</sup>lt;sup>5</sup> The Sendero Verde project (Site 70) is included as a worst-case condition for preliminary transportation planning purposes. Site 34 is not included as it was re-categorized as a potential development site.

#### **ANALYSIS PERIODS**

Based on *CEQR Technical Manual* guidelines, a quantified traffic analysis is typically required if a proposed action would result in more than 50 vehicle trip ends in a peak hour. As shown in **Table 4**, the Proposed Actions are expected to result in more than 50 total vehicle trips during the weekday AM and PM peak hours (which are typical peak periods for commuter travel demand) and the weekday midday and Saturday peak hours (which are typical peak periods for retail demand). All of these periods are therefore included in the quantified analysis of traffic conditions. Based on existing traffic volumes in the study area as reflected in automatic traffic recorder (ATR) count data, the weekday 7:30-8:30 a.m., 1:30-2:30 p.m. (midday) and 4:30-5:30 p.m. peak hours have been selected for analysis along with the Saturday 4:00-5:00 p.m. peak hour.

Transit (subway and bus) analyses typically examine conditions during the weekday AM and PM commuter peak periods, as it is during these times that overall transit demand (and the potential for significant adverse impacts) is generally greatest. Based on count data at area subway stations, the peak hours selected for the analysis of subway station conditions are 7:30-8:30 a.m. and 5-6 p.m. Based on maximum load point ridership data provided by New York City Transit, the peak hours selected for analysis of local bus conditions are 8-9 a.m. and 5-6 p.m.

According to *CEQR Technical Manual* guidelines, a quantified analysis of pedestrian conditions is typically required if a proposed action would result in 200 or more peak hour pedestrian trips. As shown in **Table 3**, the net increase in pedestrian trips resulting from the Proposed Actions would exceed the 200-trip *CEQR Technical Manual* analysis threshold during the weekday AM and PM commuter peak hours and the weekday midday and Saturday peak hours for retail demand. Based on pedestrian count data collected for the Proposed Actions, the peak hours selected for the analysis of pedestrian conditions are the weekday 7:30-8:30 a.m., 2-3 p.m. (midday) and 5:15-6:15 p.m. peak hours along with the Saturday 3-4 p.m. peak hour.

#### **TRAFFIC STUDY AREA**

#### **Project Area Street Network**

As shown in **Figure 1**, the street network in proximity to the Project Area is comprised of the typical Manhattan grid system of north-south avenues and east-west cross-streets. The primary north-south corridors serving the Project Area include First, Second, Third, Lexington, Park, Madison and Fifth avenues along with Malcolm X Boulevard. Major cross-streets include East 125<sup>th</sup>, East 116<sup>th</sup> and East 106<sup>th</sup> Street. One limited access roadway—the FDR/Harlem River Drive—also provides non-commercial vehicles with access between East Harlem and other areas of Manhattan to the north and south.

In proximity to the Project Area, **First Avenue** operates one-way northbound, typically with three moving lanes for general traffic plus a dedicated bus-only lane for NYCT M15 and M15 Select Bus Service (SBS) buses. On-street parking is typically accommodated between this bus lane and the east curb except at

locations where the sidewalk has been extended into the parking lane to accommodate a bus stop. A bicycle lane is located along the west curb and is separated from the vehicle travel lanes by a striped median and/or parking. First Avenue is a designated local truck route and at its northern end it provides direct access to the Willis Avenue Bridge to the Bronx. **Second Avenue**, which functions as a southbound couplet to First Avenue, similarly operates with three moving lanes for general traffic flanked by a dedicated bus lane for M15 and M15 SBS buses and curbside parking along the west curb, and a striped bicycle lane and parking along the east curb. The bus lane along Second Avenue is in effect from 7 a.m. to 10 a.m. and 4 p.m. to 7 p.m., Monday through Friday, and the corridor is a designated local truck route. Second Avenue begins at East 128th Street, and there is direct access to it from both the southbound Harlem River Drive and the RFK Bridge. Two northbound contra-flow lanes on Second Avenue between East 126th and East 127th streets provide access from the RFK Bridge to the northbound Harlem River Drive, and an additional southbound local lane, separated from the Second Avenue mainline by a median, extends from East 124th Street to East 120th Street.

**Third Avenue** operates with five northbound travel lanes plus parking along both curbs. It is a designated local truck route south of East 125<sup>th</sup> Street, and in proximity to the Project Area is traversed by NYCT's M98, M101, M102 and M103 local bus routes. Third Avenue terminates at East 128<sup>th</sup> Street. **Lexington Avenue**, which functions as a southbound couplet to northbound Third Avenue, is relatively narrow and operates with two moving lanes plus parking along both curbs in proximity to the Project Area. Like Third Avenue, it is traversed by NYCT's M98, M101, M102 and M103 local bus routes and is a designated local truck route south of East 125<sup>th</sup> Street. Lexington Avenue originates at East 131<sup>st</sup> Street, and it can be directly accessed from the Third Avenue Bridge.

Park Avenue is a two-way corridor that extends south from East 135<sup>th</sup> Street in the southbound direction, and terminates at East 132<sup>nd</sup> Street in the northbound direction at an on-ramp to the southbound Harlem River Drive. In proximity to the Project Area, a viaduct used by Metro-North Railroad trains separates the northbound and southbound roadways which each operate with a single moving lane plus a parking lane. To the west of Park Avenue is the northbound Madison Avenue/southbound Fifth Avenue couplet. Madison Avenue operates with three northbound moving lanes plus parking along each curb. It terminates at East 138th Street where it provides access to the Madison Avenue Bridge to/from the Bronx. Fifth Avenue originates at West 143<sup>rd</sup> Street where there also is an off-ramp from the southbound Harlem River Drive. It is discontinuous between 124th and 120th Streets due to Marcus Garvey Park. To the north of the park it typically operates with two southbound moving lanes plus parking along each curb, while to the south of the park it typically operates with three southbound moving lanes plus parking along each curb. At 110<sup>th</sup> Street, Fifth Avenue passes through Duke Ellington Circle at the northeast corner of Central Park. To the south of the circle it again operates with two moving lanes plus parking along each curb, except between the hours of 7 a.m. and 10 a.m., Monday through Friday, when the west curb lane functions as a dedicated bus lane. Both Madison Avenue and Fifth Avenue function as major bus corridors. NYC Transit M1 local buses traverse both corridors north of East 110<sup>th</sup> Street, while to the south M1 buses are joined by M2, M3, M4 and M106 local buses. A number of express bus routes also traverse Madison and Fifth avenues in proximity to the Project Area. Both Madison Avenue and Fifth Avenue are designated as local truck routes north of East 125<sup>th</sup> Street.

To the east of the Project Area is **Malcolm X Boulevard** (also known as **Lenox Avenue**) which extends northward from Central Park North (West 110<sup>th</sup> Street). This north-south roadway typically operates with two moving lanes plus a curbside parking lane in each direction. The northbound and southbound lanes are separated by a planted median, and left-turn bays are provided at many intersections. North of West 116<sup>th</sup> Street, Malcolm X Boulevard is used by NYCT M7 and M102 local buses.

As noted above, major east-west crosstown corridors include 125<sup>th</sup> Street, 116<sup>th</sup> Street and 106<sup>th</sup> Street. **East 125<sup>th</sup> Street** is the primary crosstown corridor in proximity to the Project Area. It typically operates with one moving lane, an exclusive bus lane and a curbside parking lane in each direction. At its eastern end, East 125<sup>th</sup> Street provides access to the RFK and Willis Avenue bridges along with the northbound and southbound FDR Drive/Harlem River Drive. It is a major bus corridor that is used by M60 SBS buses, M100 and M101 buses, and Bx15 buses to and from the Bronx. East 125<sup>th</sup> Street is also a designated local truck route.

The next major crosstown corridor to the south is **East 116**<sup>th</sup> **Street** which typically operates with two moving lanes plus curbside parking in each direction. At its eastern end, East 116<sup>th</sup> Street terminates at on and off-ramps to the southbound FDR drive. **East 106**<sup>th</sup> **Street**, which extends from Fifth Avenue to the FDR Drive, typically operates with one moving lane, a bike lane and a parking lane in each direction. The eastbound and westbound lanes are separated by a striped median, and left-turn bays are provided at many locations. The corridor is traversed by M106 buses.

Most other east-west cross-streets in proximity to the Project Area typically operate with one to two moving lanes plus parking along each curb. At many locations there are discontinuities in the east-west street system due to the presence of superblock developments or parks (e.g., Marcus Garvey Park and Central Park).

To the east of the Project Area is the **FDR Drive**, a limited-access parkway restricted to non-commercial vehicles that runs along the west bank of the East River to South Ferry in Lower Manhattan. North of the RFK Bridge, the parkway becomes the **Harlem River Drive** which continues along the west bank of the Harlem River to Tenth Avenue and Dyckman Street in Inwood and provides access to and from the George Washington Bridge (I-95) to New Jersey.

#### **Traffic Assignment and Analysis Locations**

The assignments of auto and taxi trips to the street network in proximity to the Project Area are based on the locations of each projected development site and the anticipated origins and destinations of vehicle trips associated with the different land uses projected for each site under the RWCDS (e.g., commercial, residential, etc.). The origins/destinations of residential and hotel trips used for the assignments are based upon 2006-2010 ACS journey-to-work data, while the origins/destinations of

office, medical office (staff), high school (staff), light industrial and research laboratory uses are based on 2006-2010 ACS reverse journey-to-work data. The assignment of destination retail trips are based on population density within three miles of the Project Area. Origins/destinations for uses that generate mostly local trips, including local retail, supermarket, restaurant, auto-related, medical office (patient), high school (student), and community center uses, are based on population density in proximity to the Project Area and surrounding neighborhoods within a 0.5-mile radius. **Tables 5 and 6** show the directional distributions of auto and taxi trips by land use based on the origin/destination data. Using these distributions, auto and taxi trips were first assigned to various portals on the periphery of the Project Area, and from there via the most direct route to each projected development site. Although some project-generated auto demand is expected to park at off-street public parking facilities in the area, auto trips were assigned directly to their respective projected development sites. This can be considered a conservative approach with respect to the traffic impact analysis as it concentrates project traffic at analyzed intersections in proximity to the Project Area rather than dispersing it to outlying public parking facilities.

Truck trips were assigned to designated local truck routes and then to the most direct paths to and from each projected development site. The majority of truck trips were assigned to the local truck routes along First, Second, Third and Lexington avenues and 116<sup>th</sup> and 125<sup>th</sup> streets. Many of these trips were assumed to enter and depart the area via the Willis, Third Avenue and RFK bridges which are also designated local truck routes.

As discussed above, projected development associated with the Proposed Actions (including the Sendero Verde project) would result in a net incremental increase of 665 vehicle trips during the weekday AM peak hour, 479 during the midday peak hour, 729 during the PM peak hour and 446 during the Saturday peak hour. As these traffic volumes would exceed 50 trips in each peak hour (the CEQR Technical Manual Level 1 screening threshold for a detailed analysis), a preliminary assignment of net increment traffic volumes was prepared for each period to help identify individual intersections that would potentially exceed 50 trips per hour (a Level 2 screening assessment). In consultation with the Department of City Planning (DCP), representative intersections most likely to be used by concentrations of action-generated vehicles traveling to and from the projected development sites were then selected for detailed analysis based on the preliminary assignments. Existing bottleneck locations and prevailing travel patterns in the study area were also taken into consideration. Figure 2 shows the locations of the 50 intersections (49 signalized and one unsignalized) that were selected for detailed analysis. All are located between East 106<sup>th</sup> Street and East 128<sup>th</sup> Street. The majority of analyzed intersections are located along the couplet of northbound Third Avenue and southbound Second Avenue (16 intersections and 11 intersections, respectively). Other north-south corridors with analyzed intersections include First Avenue (two intersections), Lexington Avenue (five intersections), Park Avenue (four intersections northbound and five intersections southbound) and Madison Avenue (six intersections). There is also one analyzed intersection along the southbound FDR Drive Service Road (at East 106<sup>th</sup> Street).

TABLE 5: Directional Distributions of Auto/Taxi Trips for Non-Local Commercial and Residential Uses

Land Use	Manhattan	Bronx	Brooklyn	Queens	Staten Island	Long Island	New Jersey	Upstate/ Connecticut	Other Out-of-State
Office/Light Industrial/Research Lab <sup>1</sup>	11.8%	15.0%	8.4%	16.1%	2.0%	8.9%	19.2%	17.4%	1.2%
Residential/Hotel	62.1%	11.4%	5.8%	8.3%	0%	1.3%	5.3%	5.8%	0%
Destination Retail	64.0%	23.7%	0%	12.3%	0%	0%	0%	0%	0%

#### Notes:

<sup>1</sup> Includes office, medical office (staff), high school (staff), wholesale/warehousing, storage, manufacturing and research laboratory uses.

TABLE 6: Directional Distributions of Auto/Taxi Trips for Local Retail/Community Uses

	Manhattan							
Land Use	North	South	East	West				
Local Retail/Community Uses <sup>1</sup>	13%	31%	20%	36%				

#### Notes:

Unsignalized Analysis Location

Signalized Analysis Location

0

**Figures 3 through 6** show the assignment of net incremental peak hour vehicle trips from the Proposed Actions' RWCDS at analyzed intersections within the traffic study area.

#### **TRANSIT**

According to the general thresholds used by the Metropolitan Transportation Authority (MTA) and specified in the *CEQR Technical Manual*, detailed transit analyses are generally not required if a proposed action is projected to result in fewer than 200 peak hour rail or bus transit riders. If a proposed action would result in 50 or more bus passengers being assigned to a single bus line (in one direction), or if it would result in an increase of 200 or more passengers at a single subway station or on a single subway line, a detailed bus or subway analysis would be warranted.

#### **Subway Analysis**

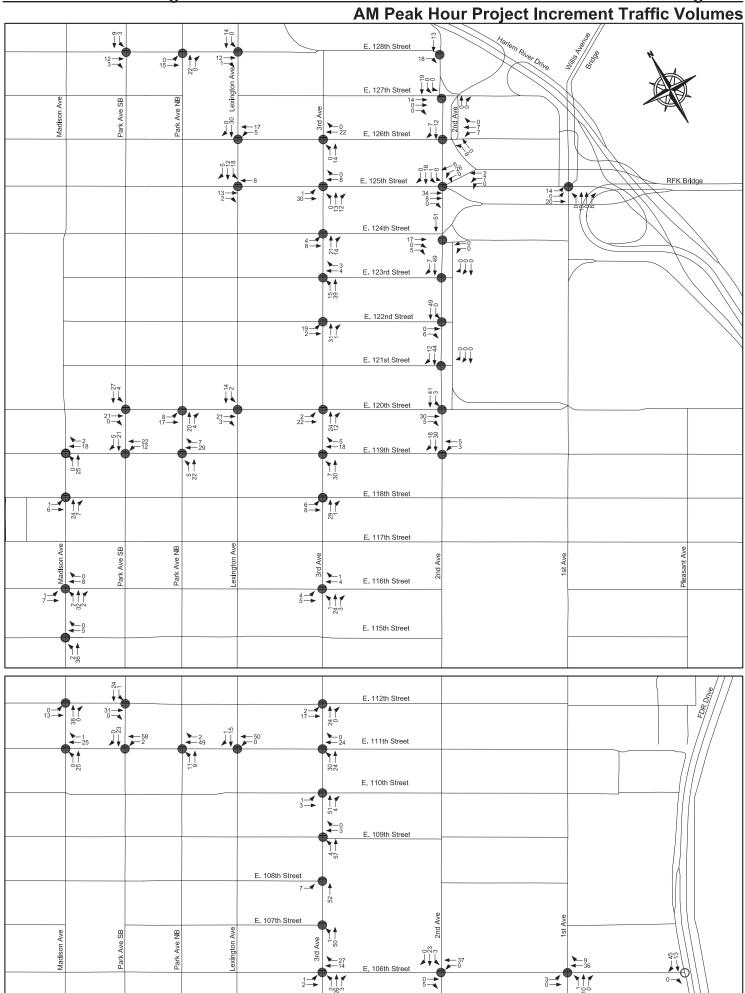

#### **Subway Stations**

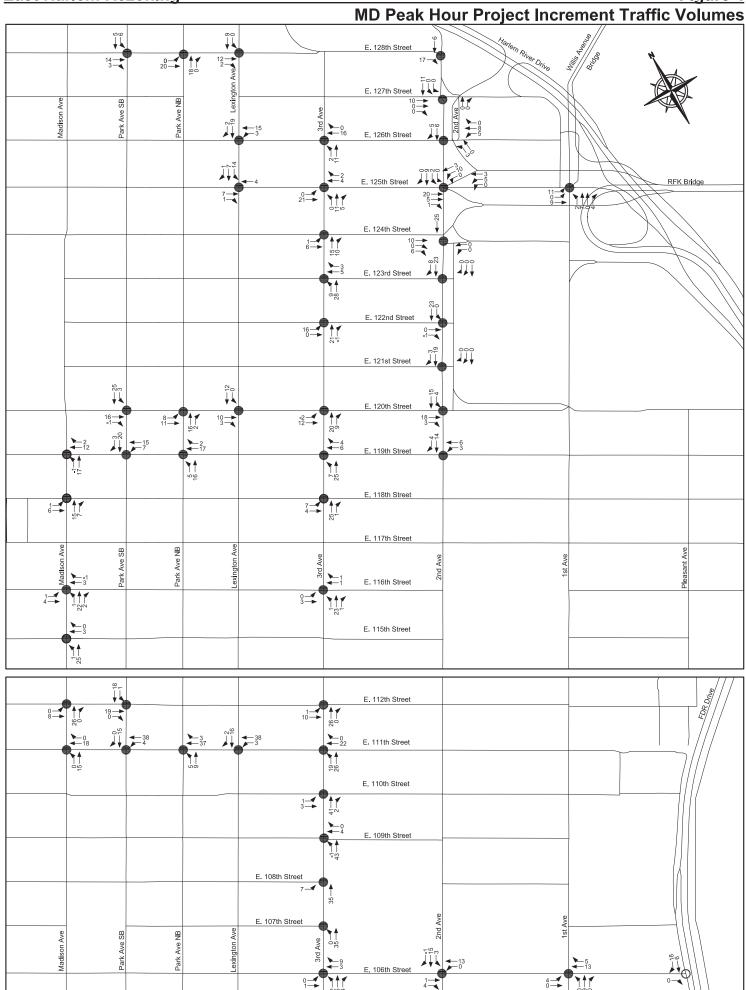

There are currently a total of eight NYCT subway stations located in proximity to projected development sites. As shown in **Figure 7**, No. 6 trains operating on the Lexington Avenue Line serve four below-grade stations at  $103^{rd}$  Street,  $110^{th}$  Street,  $116^{th}$  Street and  $125^{th}$  Street. The  $125^{th}$  Street station is also served by Nos. 4 and 5 Lexington Avenue Line express trains. To the west of the Project Area, Nos. 2 and 3 trains operating on the Lenox Avenue Line serve four stations located beneath Malcolm X Boulevard (Lenox Avenue) at Central Park North ( $110^{th}$  Street),  $116^{th}$  Street,  $125^{th}$  Street and  $135^{th}$  Street.

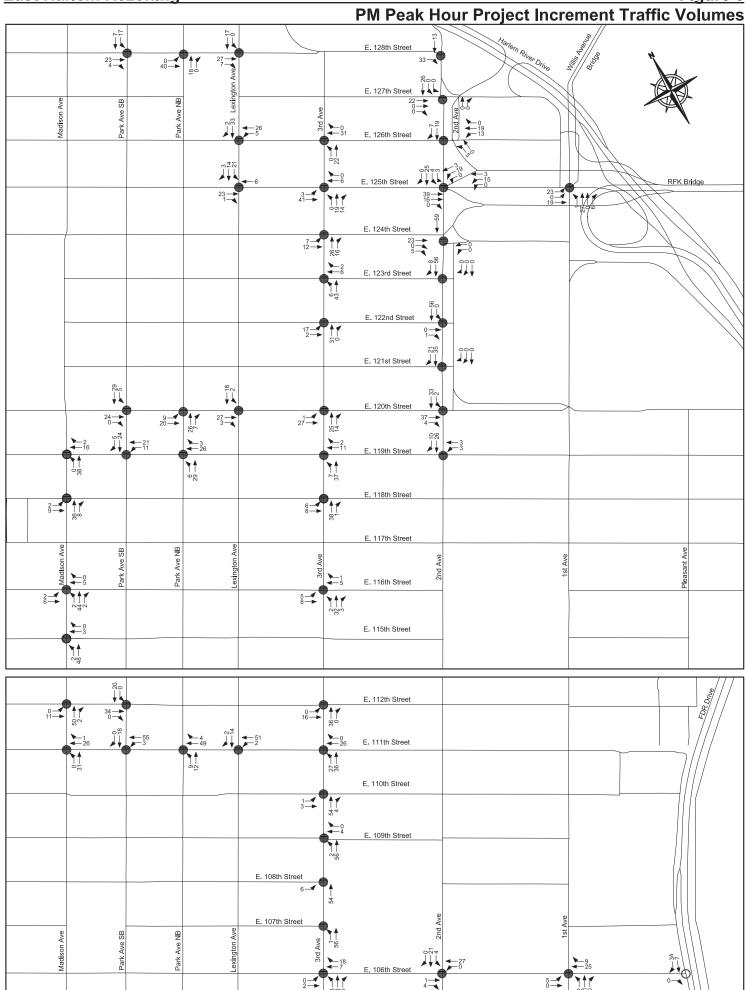

#### Subway Assignment and Analyzed Stations

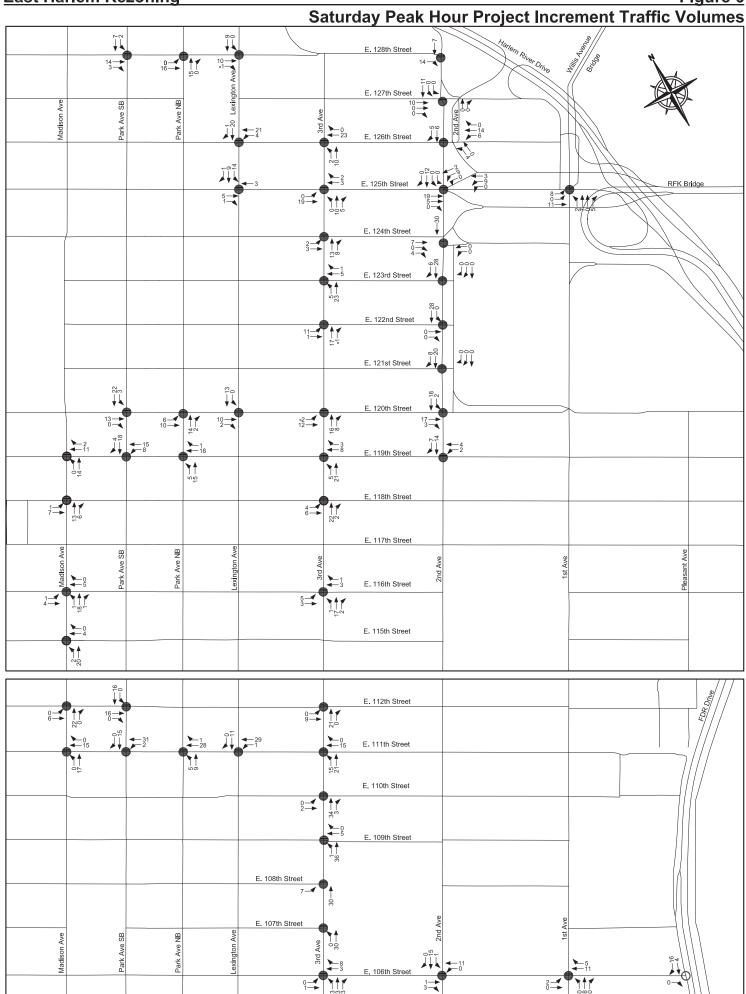

As shown in **Table 3**, under the RWCDS with the Sendero Verde project, the Proposed Actions would generate a net increment of approximately 3,028 and 3,443 subway trips (in + out combined) during the weekday AM and PM commuter peak hours, respectively. Based on the travel demand forecast, the proximity of projected development sites to individual subway stations, the subway routes serving each station, and census journey-to-work data, it is anticipated that action-generated subway demand would be most concentrated at the four stations on the Lexington Avenue Line. Although the four stations on the Lenox Avenue Line are all located more than ¼-mile from the nearest projected development site, some action-generated demand is also expected to utilize these stations.

**Table 7** shows the estimated net incremental subway trips generated by the Proposed Actions during the weekday AM and PM peak hours at each of the eight existing subway stations in proximity to the Project Area. As shown in **Table 7**, the highest number of peak hour subway trips are expected to occur at the 125<sup>th</sup> Street station on the Lexington Avenue Line which would experience an estimated 933 incremental trips (in + out combined) in the AM peak hour and 1,104 in the PM peak hour. The second highest number of trips would occur at the 110<sup>th</sup> Street Lexington Avenue Line station which would experience an estimated 903 incremental trips in the AM peak hour and 965 in the PM. By contrast, all four Lenox Avenue Line stations are expected to experience fewer than 100 new trips in both the AM and PM peak hours.

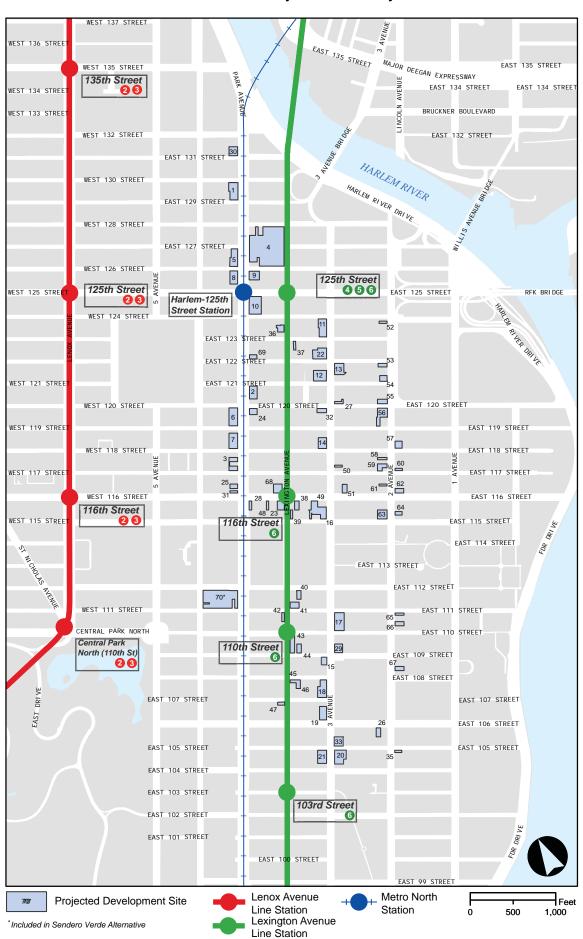

#### **Project Area Subway and Commuter Rail Stations**

**TABLE 7: RWCDS Net Incremental Peak Hour Subway Trips by Station** 

	AM P	eak Hour 1	Γrips	PM	Peak Hour	Trips
Subway Station	Into Project	Out of Project	Total	Into Project	Out of Project	Total
Project Summary						
Peak Hour Project Increment Person Trips:	2,396	3,090	5,486	3,512	3,590	7,102
Peak Hour Project Increment Subway Trips:	1,098	1,930	3,028	1,839	1,604	3,443
Subway Station Summary						
103 <sup>rd</sup> Street (6)	87	174	261	172	138	310
110 <sup>th</sup> Street (6)	428	475	903	428	537	965
116 <sup>th</sup> Street (6)	162	550	712	512	293	805
125 <sup>th</sup> Street (4, 5, 6)	328	605	933	602	502	1,104
Central Park North (110 <sup>th</sup> Street) (2, 3)	46	36	82	32	55	87
116 <sup>th</sup> Street (2, 3)	14	43	57	41	27	68
125 <sup>th</sup> Street (2, 3)	31	45	76	50	49	99
135 <sup>th</sup> Street (2, 3)	2	2	4	2	3	5
Total	1,098	1,930	3,028	1,839	1,604	3,443

The analysis of subway station conditions focuses on the four subway stations at which incremental demand from the Proposed Actions would exceed the 200-trip *CEQR Technical Manual* analysis threshold in one or both peak hours. As shown in **Table 7**, these are the four Lexington Avenue Line stations at 103<sup>rd</sup> Street, 110<sup>th</sup> Street, 116<sup>th</sup> Street and 125<sup>th</sup> Street. For each of these stations, key circulation elements (e.g., street stairs and fare arrays) expected to be used by concentrations of new demand from the Proposed Actions will be analyzed.

In addition to the existing subway stations discussed above, it should be noted that in the foreseeable future three new stations are expected to open in proximity to the Project Area under Phase II of the Second Avenue Subway. These stations, to be served by Q trains, will be located beneath Second Avenue at 106<sup>th</sup> Street and 116<sup>th</sup> Street, and beneath 125<sup>th</sup> Street at Lexington and Park avenues where there will be connections to Lexington Avenue Line 4, 5 and 6 trains and to the Harlem-125th Street Metro-North station. Upon the opening of these new subway stations, demand at existing stations located in proximity to the Project Area is expected to decrease as both No-Action demand and trips generated by the Proposed Actions would be diverted to the Second Avenue Line which will provide an alternate route to Midtown and Lower Manhattan. Conditions at existing Lexington Avenue Line stations are therefore expected to improve with the new subway service. To be conservative, the EIS will assess 2027 conditions at area subway stations without Phase II of the Second Avenue Subway in operation. Data from the 2004 Second Avenue Subway FEIS will be used to qualitatively assess future conditions with completion of Phase II of the Second Avenue Subway.

#### Subway Line Haul

As discussed above, the Project Area is currently served by a total of five NYCT subway routes—the Nos. 4, 5 and 6 trains operating along the Lexington Avenue Line and the Nos. 2 and 3 train operating along the Lenox Avenue Line. As the Proposed Actions are expected to generate 200 or more new peak hour subway trips in one direction, an analysis of subway line haul conditions will be included in the EIS. The analysis will utilize existing maximum load point subway service and ridership data provided by NYCT to assess existing, future No-Action, and future With-Action conditions at the maximum load points of each analyzed subway route during the weekday AM and PM peak hours. Outputs from MTA's Regional Transit Forecasting Model (RTFM) provided by NYCT will also be used to develop the estimates of peak hour demand under future conditions.

#### **Bus Analysis**

#### **Bus Routes**

The Project Area is served by a total of 13 local bus routes, six Limited (LTD) bus routes and two Select Bus Service (SBS) routes operated by the MTA. Limited bus routes provide limited-stop service along all or a portion of the route. Some Limited services only operate in the peak direction and/or during peak periods. Select Bus Service routes are designed to provide faster service through dedicated bus lanes, greater spacing between stops, and a fare collection system where customers pay prior to boarding and may enter through all doors on the bus. SBS buses also have a unique livery to distinguish them from other bus services. The bus routes operating in proximity to the Project Area are shown in **Figure 8** and described in **Table 8**.

#### **Bus Assignment and Analyzed Routes**

As shown in **Table 3**, projected development sites (including the Sendero Verde project) are expected to generate a net total of approximately 760 and 880 incremental bus trips during the weekday AM and PM peak hours, respectively. These trips were assigned to each bus route based on proximity to individual projected development sites and current ridership patterns. **Table 8** shows the anticipated numbers of new riders expected on each route in the AM and PM peak hours. According to the general thresholds used by the MTA and specified in the *CEQR Technical Manual*, a detailed analysis of bus conditions is generally not required if a proposed action is projected to result in fewer than 50 peak hour trips being assigned to a single bus route (in one direction), as this level of new demand is considered unlikely to result in significant adverse impacts. As shown in **Table 8**, with project-generated demand distributed among a total of 21 bus routes, only two routes are expected to experience 50 or more new trips in one direction in at least one peak hour. These two routes—the M15 SBS and the M101 (LTD)—will therefore be analyzed in the EIS. Data from the 2004 *Second Avenue Subway FEIS* will be used to qualitatively assess future bus conditions with completion of Phase II of the Second Avenue Subway.

#### **Project Area Bus Routes**

#### Notes

**Bold** - denotes greater than 50 incremental trips per direction.

<sup>\*</sup> Local service does not serve the Project Area during analyzed weekday AM and PM peak periods.

#### **Metro-North Commuter Rail Service**

The Metro-North Railroad (MNR) 125<sup>th</sup> Street commuter rail station is located in proximity to the Project Area on Park Avenue at East 125<sup>th</sup> Street. As the Proposed Actions are expected to generate a total of less than 100 trips by commuter rail in any one peak hour, impacts to the 125<sup>th</sup> Street rail station are not anticipated to result from the Proposed Actions, and it will not be analyzed in the EIS. As some Metro-North trips would also likely start or end on another mode of transit, commuter rail trips are conservatively included in the totals for the subway mode for travel demand forecasting purposes.

#### **PEDESTRIANS**

Under *CEQR Technical Manual* guidelines, detailed pedestrian analyses are generally warranted if a proposed action is projected to result in 200 or more new peak hour pedestrians at any sidewalk, corner area or crosswalk. As shown in **Table 3**, under the RWCDS with the Sendero Verde project, the Proposed Actions are expected to generate approximately 1,054 walk-only trips (in + out combined) in the weekday AM peak hour, 2,014 in the midday, 2,019 in the PM, and 2,382 in the Saturday peak hour. Persons en route to and from subway station entrances and bus stops would add approximately 3,788, 1,925, 4,323 and 3,164 additional pedestrian trips to sidewalks and crosswalks in the vicinity of the Project Area during these same periods, respectively. In the weekday AM and PM peak hours, new pedestrian trips would be most concentrated on sidewalks and crosswalks adjacent to projected development sites as well as along corridors connecting these sites to area subway station entrances. In the midday and Saturday periods, pedestrian trips would tend to be more dispersed, as people travel throughout the area for lunch, shopping and/or errands.

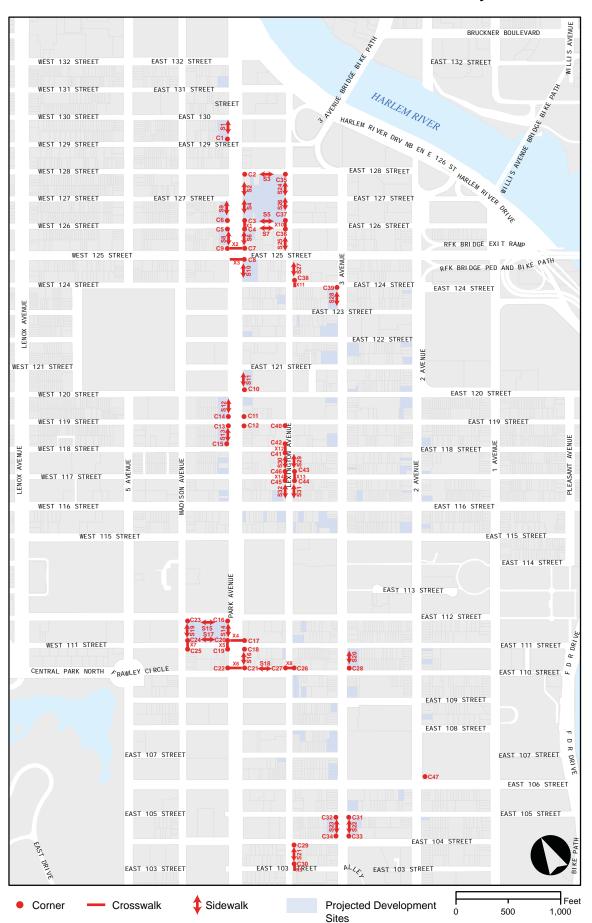

Given the relatively large numbers of pedestrian trips that would be generated by the Proposed Actions, a quantitative pedestrian analysis will be provided in the EIS. In consultation with the Department of City Planning (DCP), representative pedestrian elements most likely to be used by concentrations of action-generated pedestrian trips traveling to and from the projected development sites were selected for detailed analysis based on a preliminary assignment. As shown in **Figure 9**, these analysis locations include a total of 32 sidewalks, 47 corner areas and 14 crosswalks where new pedestrian demand would be most concentrated and most likely to result in significant adverse impacts.

#### **PARKING**

Parking demand from commercial and retail uses typically peaks in the weekday midday period and declines during the afternoon and evening. By contrast, residential demand typically peaks during the overnight period.

It is anticipated that the on-site required accessory parking may not be sufficient to accommodate the overall incremental demand that would be generated by the Proposed Actions. As such, detailed existing on-street and off-street parking inventories for the weekday midday and overnight periods will be provided in the EIS to document the existing supply and demand during each period. The parking

#### **Pedestrian Analysis Locations**

analyses will document changes in the parking supply and utilization in the Project Area and within a ¼-mile radius of projected development sites under both No-Action and With-Action conditions.

The forecast of parking demand generated by the residential component of the Proposed Actions' RWCDS will be based on 2010-2014 5-year ACS data on average vehicles per household for Manhattan Census Tracts 166, 168, 170, 172, 174.01, 174.02, 180, 182, 184, 188, 194, 196, 198, 206, and 242 which encompass the Project Area. Parking demands from all other uses will be derived from the forecasts of daily auto trips from these uses. Estimates of future parking utilization will account for net reductions in demand associated with No-Action land uses displaced from projected development sites under the RWCDS.

The forecast of new parking supply under the RWCDS will be based on the number of accessory parking spaces that would be provided on projected development sites in both the No-Action and With-Action conditions. The forecast of future supply will also account for accessory parking spaces associated with the With-Action commercial uses, which have lower commercial demand in the overnight hours.

#### **APPENDIX A**

#### **REFERENCE MATERIAL**

- (1) 2009 National Household Travel Study (Table 16)
- (2) 2000 Regional Travel Household Interview Survey (pages 20-21)

### **SUMMARY OF TRAVEL TRENDS**

2009 National Household Travel Survey

The trend of declining vehicle occupancy may have started to reverse, as overall occupancy shows an increase in 2001 and 2009. In 2009, the rise in occupancy was the result of a significant rise in vehicle occupancy for social and recreational travel – changes in occupancy for other purposes were not noteworthy. The calculated occupancy in this table is miles-weighted, using the reported number of people on the trip and the length of the trip together.

Table 16. Average Vehicle Occupancy for Selected Trip Purpose 1977, 1983, 1990, and 1995 NPTS, and 2001 and 2009 NHTS (Person Miles per Vehicle Mile).

Trip Purpose	1977	1983	1990	1995	2001	2009	95% CI
To or From Work	1.3	1.29	1.14	1.14	1.14	1.13	0.01
Shopping	2.1	1.79	1.71	1.74	1.79	1.78	0.05
Other Family/Personal Errands	2	1.81	1.84	1.78	1.83	1.84	0.04
Social and Recreational	2.4	2.12	2.08	2.04	2.03	2.20	0.06
All Purposes	1.9	1.75	1.64	1.59	1.63	1.67	0.03

#### Note:

- All purposes includes other trip purposes not shown, such as trips to school, church, and work-related business.
- "Other Family/Personal Errands" includes personal business and medical/dental. Please see Appendix A Glossary for definition.
- NPTS is Nationwide Personal Transportation Survey. CI is Confidence Interval.

#### **Focus on Auto Trips**

The two peak travel times for auto trips made by area residents peak in the morning between 8 and 9 am, and in the afternoon between 5 and 6 pm.

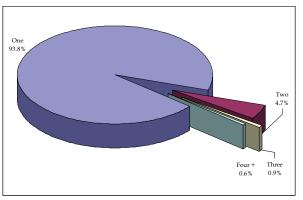

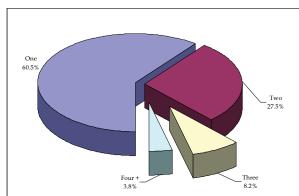

Diurnal Distribution - Hour of Departing - Auto Weekday Trips

- The average auto vehicle trip is 8.7 miles long, and takes 21.0 minutes to complete at an average travel speed of 23.3 miles per hour.
- Auto trips in New York City are shorter (7.7 miles), but slower (16.4 mph) and take longer in time (27.5 minutes).
- About one-quarter (29.3%) of auto trips in the region are in the 1-3 mile range, about one-fifth (19.0%), in the 5-10 mile range, and one-tenth (9.6%) between 3 and 5 miles in length.
- New York City accounts for about 15% (4.0% Manhattan; 11.1% other NYC) of regional Vehicle Miles of Travel (VMT) by accounted for by area residents' automobiles.
- Trips from Long Island account for about 18% of VMT.
- The three counties of Middlesex, Morris, and Somerset in New Jersey represent about 13% of the total of auto VMT in the region.
- About 21% is associated with relatively long trips 30 to 60 miles in length.
- Vehicle occupancy rates are reasonably uniform across the region, with most counties fairly close to the regional average of 1.40 persons per car for weekday travel.
- Vehicle occupancy rates are lower than average for trips in the longer trips in the 10 to 60 mile range (1.29 to 1.23). They are highest (1.52) for the very shortest trips under a mile and for the longest trips over 60 miles in length.
- For work travel, vehicle occupancy across the region is close to the average of 1.10.

- Similarly, there is not a great deal of variation for non-work travel from the regional average of 1.57 persons per vehicle.
- About three-quarters (72.5%) of weekday auto trips are made as single occupant, or driver only trips; about one in five (19.2%) with a single passenger, and only 8.3% representing "HOV" auto trips with 3 or more occupants.
- Single Occupant Vehicle (SOV) auto trip shares generally increase with trip distance, and are the highest for work travel in the region at 93.7%.

### Distribution of Auto Trips – by Number of Occupants Work Trips Other (non-Work) Trips

## Total

В

Notes:

Net Public Parking Demand = excess demand assigned to off-street public parking facilities or on-street spaces; negative values rounded to zero.

Projected development sites 2, 6, 7, 11, 13, 49, 69 and 70 unchanged in the No-Action condition. Demand accounted for in existing inventory.

Site 34 changed from Projected to Potential and therefore no longer included in the analysis.

1,106

1,046

Sites 6 and 7 would remain public parking facilities with a total of 126 spaces in the No-Action condition.

TABLE E-6 Action-With-Mitigation Intersection Level of Service Analysis
