#ONENYC

“A more resilient NYC is one where neighborhoods, buildings and infrastructure can withstand and recover quickly from flooding and climate events.”

Coastal defenses

are strengthened as first line of defense against flooding and sea level rise

Buildings

are designed to withstand and recover from flooding

Infrastructure

is protected from climate hazards

Residents and businesses

are prepared

Flood Resilience Zoning Projects at DCP

2013

“Flood Text”

initial temporary regulations
to facilitate recovery

2018

“Flood Text Update”
improve upon, and make
permanent, the Flood Text

Citywide Flood Risk

NYC's flood risk is high and it will only continue to increase.

100 year (1% annual chance) floodplain	2015 PFIRMS	2050s Projected FIRMS
Residents	400,000	808,900
Buildings	71,500	118,000

Buildings:
 80% 1-4 units
 7% 5+ units
 13% nonresidential

Residential Units:
 30% 1-4 units
 70% 5+ units

50 of 59 Community Boards
 45 of 51 Council Districts

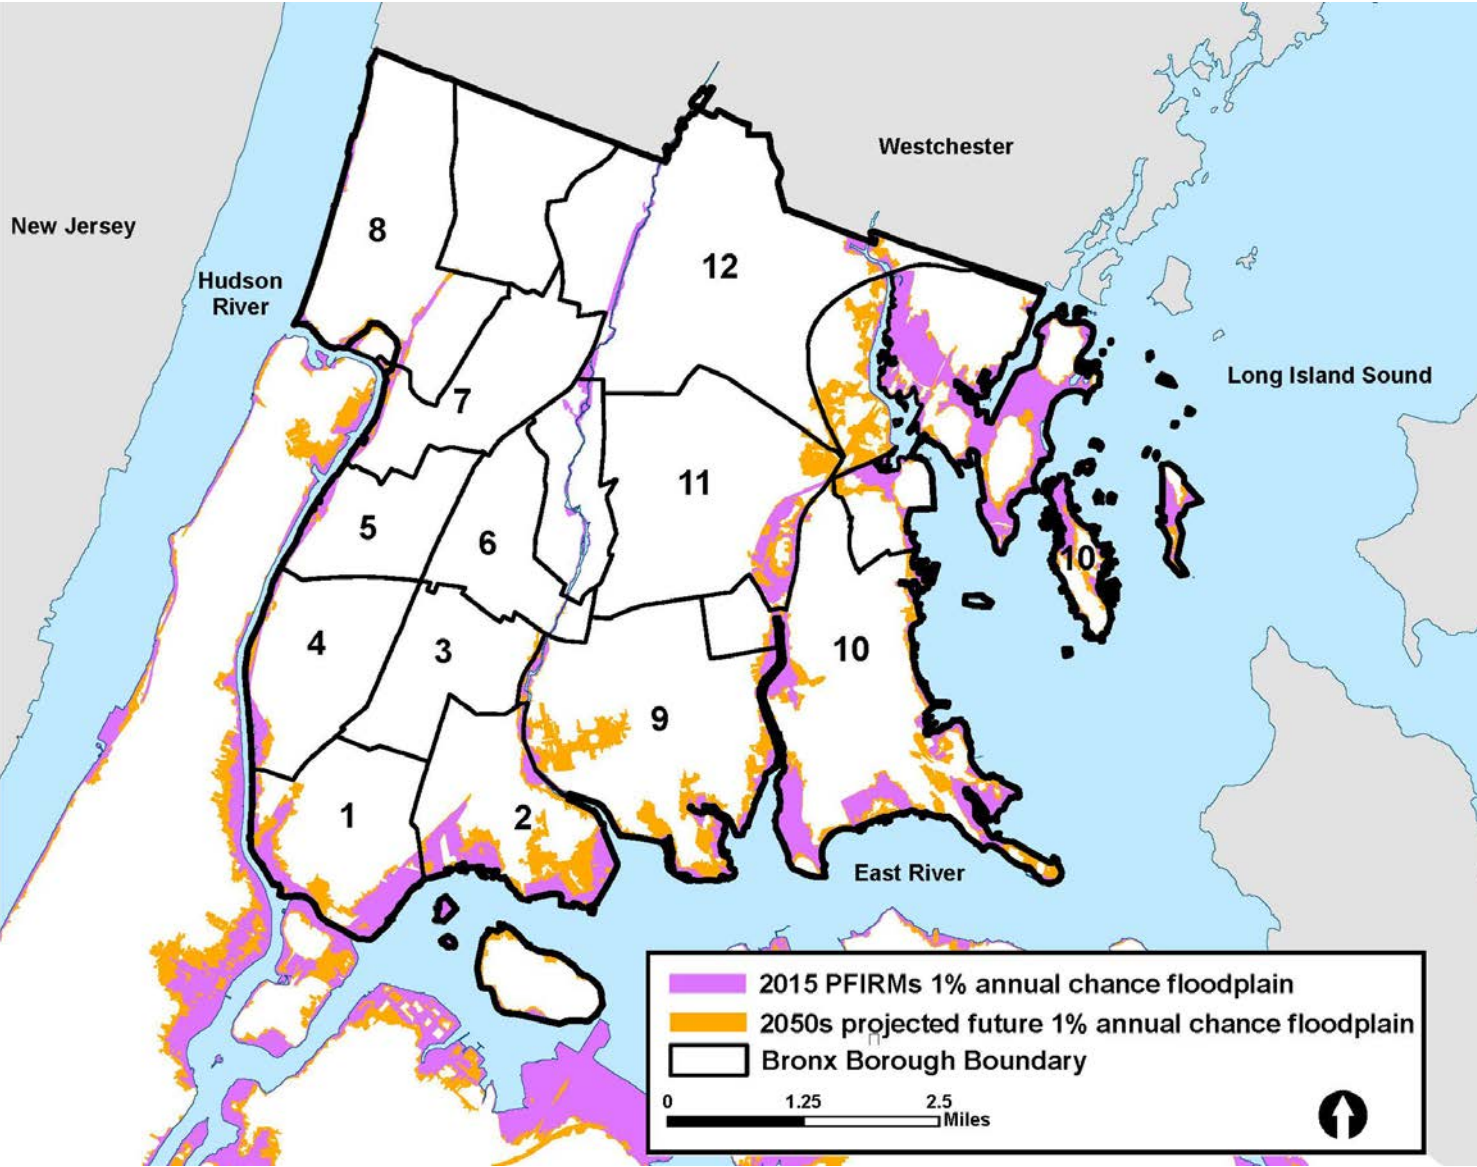

Map analysis based on Preliminary Flood Insurance Rate Maps (PFIRMS)
 Future flood zone impacts based on NPCC2 90th percentile sea level rise projections

Bronx Flood Risk

A significant portion of the Bronx's critical infrastructure and institutions, building stock, and population is located in the 100 year floodplain.

100 year (1% annual chance) floodplain	2015 PFIRMS	2050s Projected FIRMS
Residents	16,700	41,900
Buildings	3,900	8,400

Map analysis based on Preliminary Flood Insurance Rate Maps (PFIRMS)
 Future flood zone impacts based on NPCC2 90th percentile sea level rise projections

Bronx CD 10 Flood Risk

Community District 10 is one of the most vulnerable in the Borough with 60% of the Bronx's floodplain population and nearly 80% of floodplain building stock.

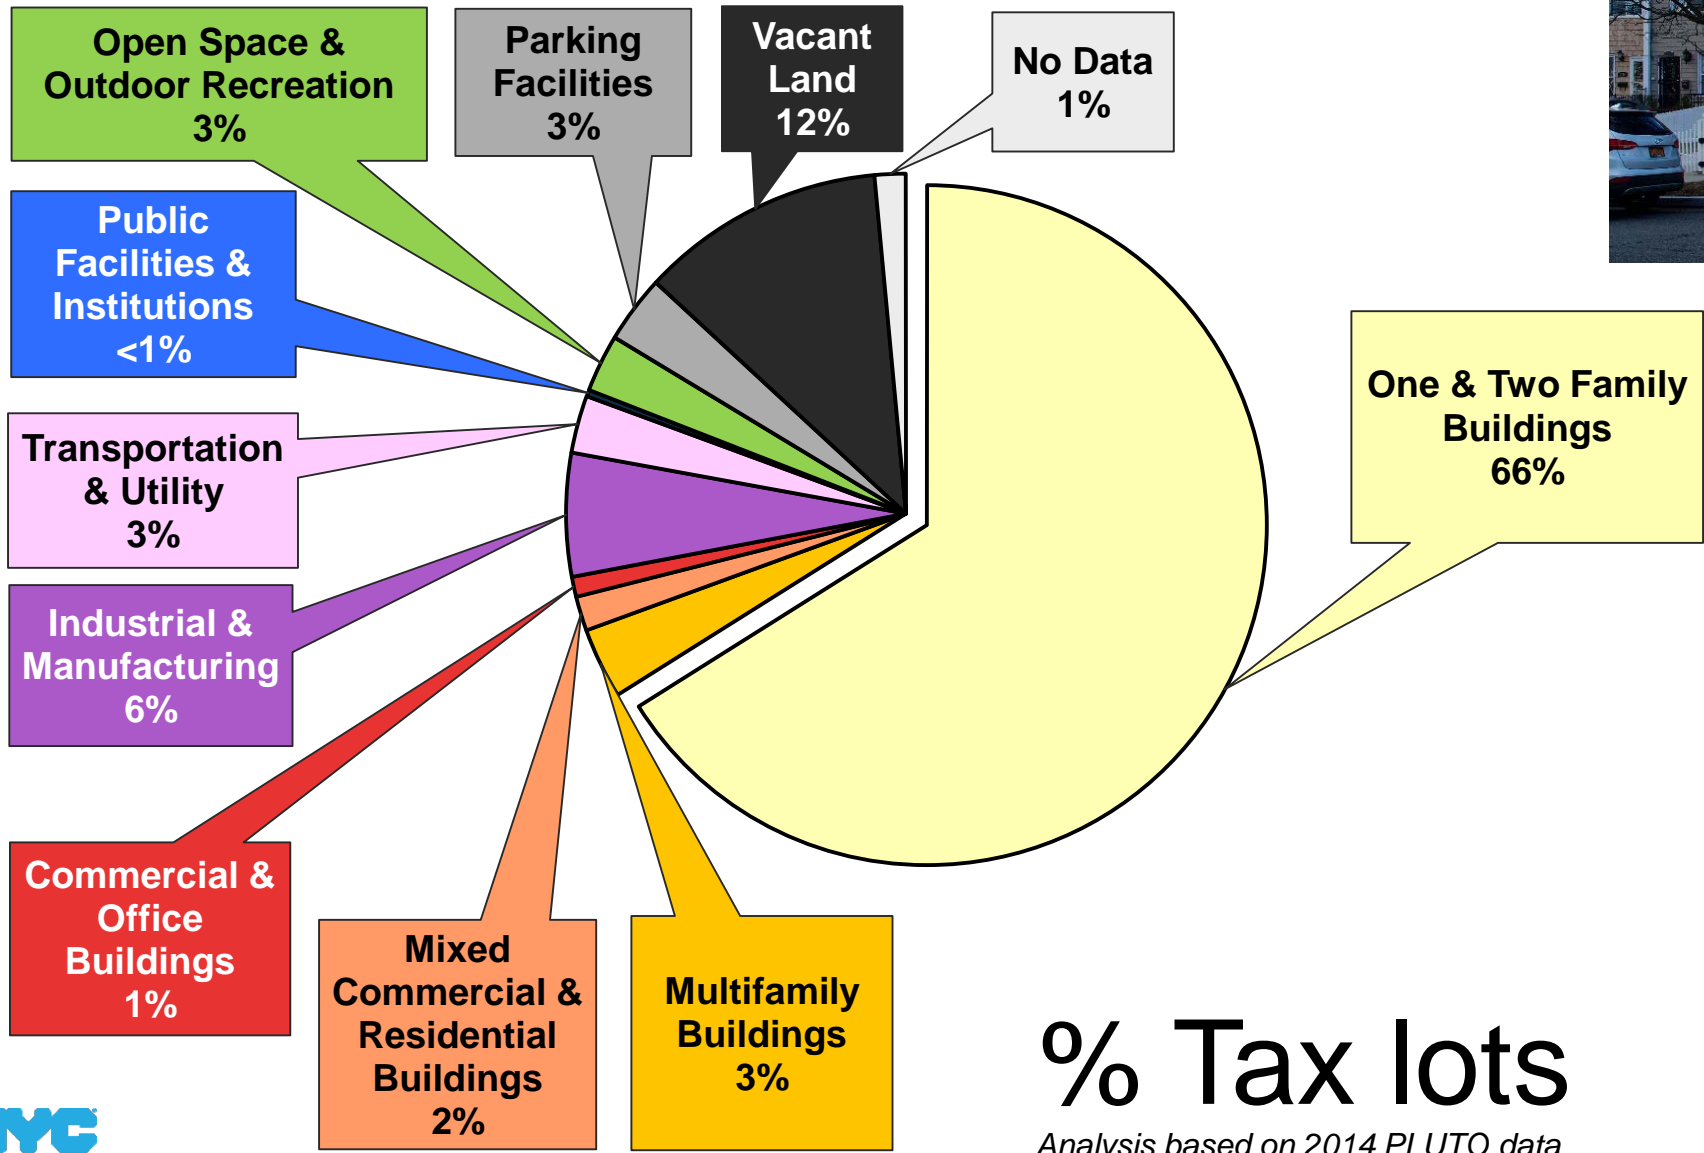

100 year (1% annual chance) floodplain	2015 PFIRMS	2050s Projected FIRMS
Residents	10,100	17,800
Buildings	3,100	5,200

Map analysis based on Preliminary Flood Insurance Rate Maps (PFIRMS)
Future flood zone impacts based on NPCC2 90th percentile sea level rise projections

Bronx Flood Risk

Land use + Common Building Typologies

% Tax lots

Analysis based on 2014 PLUTO data

% Acres

Analysis based on 2014 PLUTO data

How are buildings in the floodplain regulated?

FEMA

Flood Insurance Rate Maps (FIRMs)

Determine where floodplain regulations apply

National Flood Insurance Program

Set up Insurance Rates depending on building elevation and other requirements

Construction Standards (ASCE 24)

Design minimum construction requirements for flood hazard areas

NYC

Building Code (DOB)

Requires new buildings and substantial improvements to meet FEMA standards

Zoning Resolution (DCP)

Zoning accommodates these regulations and improves neighborhood character

Flood resilient construction

Required by DOB

**Building Code
(DOB)**

Requires new buildings and substantial improvements to meet FEMA standards

Required
for all new buildings

Not required for existing buildings
(unless substantially damaged or improved)

Substantially Damaged: Restoring Cost \geq 50% Market Value
Substantially Improved: Improvement Cost \geq 50% Market Value

Flood resilient construction

Terms

A building's **Base Flood Elevation (BFE)** and **Design Flood Elevation (DFE)** affect the regulatory and building code requirements and may have an impact on flood insurance premiums.

The expected height of flooding from the 1% annual chance flood for each flood zone, is known as the **Base Flood Elevation (BFE)**.

The **Design Flood Elevation (DFE)** is the height of the lowest inhabited floor.

Additional height between the BFE and the DFE is known as **freeboard**.

Flood resilient construction

Required by DOB

Flood resilient construction standards require certain buildings to elevate the lowest floor, as well as mechanical equipment, above the Design Flood Elevation (DFE).

Flood resilient construction Required by DOB

Flood resilient construction standards require certain buildings to elevate the lowest floor, as well as mechanical equipment, above the Design Flood Elevation (DFE).

Mechanical systems are elevated above DFE

Living spaces are elevated above DFE

WET-FLOODPROOF

Site is filled to lowest adjacent grade

DFE

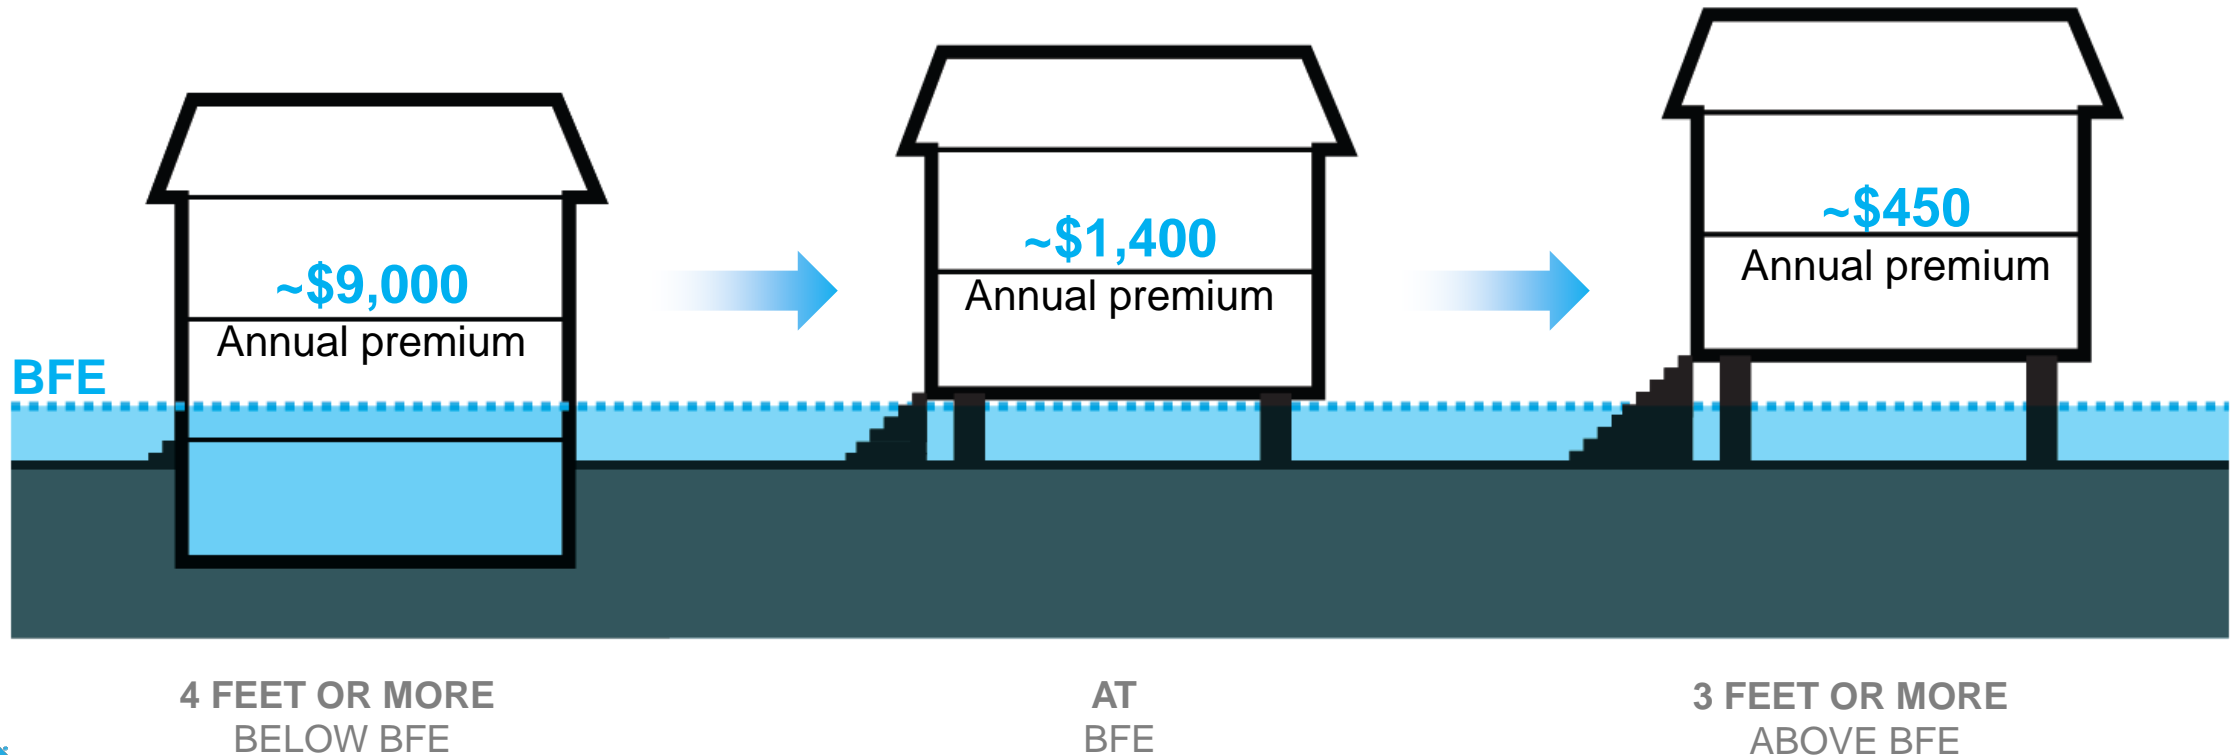

Residential Building
(Multifamily with lobby space)

Flood insurance rates

Set by FEMA

Raising or retrofitting your building or home will reduce costs

FEMA's flood insurance premiums are lowest when the lowest inhabited floor (any area not used solely for storage, access or parking) is elevated above the **Base Flood Elevation (BFE)**.

2013 Citywide Flood Text

Amended zoning in six key areas

1
Height
Measured from
flood elevation

2
Access
Flexibility for
stairs, ramps, lifts

3
Parking
Flexibility to
relocate parking

4
Systems
Flexibility to
relocate/elevate

5
Ground Floors
Account for costs
of new flood risk

6
Streetscape
Require features to
mitigate blank wall

Flood Text Update

Need for a new citywide text amendment

1

Make the provisions of the current, temporary 2013 Flood Text **permanent**

2

Fix and improve provisions based on studies, lessons learned, and outreach

3

Begin to **promote** new development + proactive retrofitting to high resiliency standards

Flood Text Update

Fix and improve provisions based on lessons learned

1

Height

Homeowners may face the loss of subgrade spaces when retrofitting

2

Height

Property owners may want to address future risk by over-elevating

3

Ground Floors

Current incentives to keep active ground floors may not be enough

4

Homes in M Districts

Existing homes in M. Districts, if damaged, may not be able to rebuild

5

Old Homes on Small Lots

Old bungalow homes on small lots may need more flexibility to rebuild in the future

Flood Text Update Outreach

DCP has planned a robust public engagement process:

As part of this outreach process, DCP will:

- **Partner with stakeholders** to educate and promote awareness of flood risk and resiliency issues
- **Explain how zoning tools** relate to resiliency
- **Explore unique neighborhood issues** through in-depth public presentations and workshops
- Develop a proposal through an **iterative process** that is shaped by feedback

* Schedule is tentative and subject to change

Zoning for Flood Resilience: Community Workshop

Do you live or work in the Eastern Bronx floodplain?
Come to our workshop to learn how zoning changes can help
make your neighborhood more resilient to flooding!

Saturday, October 21 @ SUNY Maritime, 6 Pennyfield Avenue
11:00 am - 1:00 pm Maritime Academic Center, Room 110
Bronx, NY 10465 (Parking available)

NYC Department of City Planning is holding an informational meeting and workshop about design and development in the floodplain.

Co-sponsored by: Bronx Community Board 10

Following a short presentation on zoning rules that were adopted after Hurricane Sandy to facilitate resilient buildings, participants will have the opportunity to share their ideas on how to shape a future update to these city rules to advance resiliency in the Bronx and across the city.

Workshop Goals:

- Learn about strategies to floodproof your home and protect it from future floods;
- Find out how zoning can make promote floodproofing strategies and make neighborhoods more resilient to flooding;
- Establish urban design priorities for the Eastern Bronx and other coastal neighborhoods;
- Help shape a future change to the special zoning rules that govern development in the floodplain.
